

# Catastrophic climate destabilization

Thank you for the thousands of letters that you send each year in response to my columns. I attempt to bring you a ground level understanding of what Americans face in the coming years. All your letters educate me and enlighten my writing endeavors. At the same time, I want to give you a voice. So keep writing those letters.

In this exclusive interview with George A. Phelps, retired US Army officer of the 1st Calvary, he examines the consequences of our open borders policy carried on by your elected Congressional critters as well as the current president in the White House.

Mr. Phelps, please give us an idea of our future with climate change from your perspective:

“It’s a fact that climate change is occurring all the time.” said Phelps. It’s a natural phenomenon of nature. With climate change there is also global warming and global freezing. Climate Change has occurred since the birth of Mother Earth. Mother Earth is what? Six billion years old?

“However there are contributors to climate change/global warming beyond Mother Earth’s normal cycles. As the human race has increased in numbers, it has generated many unnatural factors that contribute to climate change/global warming.

“Emissions from human generated pollutions are beginning to cause changes in climate and global warming. Estimates as to the percentage of the human contributions to climate change varies, depending on whom you’re talking to or which source you’re reading. The estimates can vary from 1% to 5% based on what I have read. Well that doesn’t seem like very much but as the human population of the world increases that figure will

continue to increase without doubt.

“We know that our environment in many places throughout the world is contaminated and that the contamination is increasing constantly. Our ‘breathing air’ is contaminated to the point that millions of human beings are dying from many diseases caused by this contamination and there seems to be no answer to cure or prevention. The only answer has to be in stopping the sources of this contamination that have been developed by technology. But, technology isn’t the only ‘culprit’ in developing and increasing contamination. Human population is a major contributor as well.

“Humans have developed technologies that are major contributors to environmental contamination. Let me pick on automobiles; automobiles are powered by gasoline, in the main. Gasoline is the product of oil refinement and the product of burning gasoline to power automobiles produces exhaust fumes, which contaminates the air we breathe thus the result, is air pollution. The process of refining oil to produce gasoline also produces contamination at and from the refineries.

“Technology has not yet produced a non-polluting mode of transportation to replace the polluting automobiles. The current ‘method of choice’ seems to be ‘electric cars.’ However, it takes oil and oil or coal products to produce electricity. Replacing gasoline as a fuel for powering cars with electric cars doesn’t solve the problem of the contamination generated by oil or coal since they are still required to furnish electricity to the electric cars.

“I’m not sure the average citizen understands that. But, with all that said as the human population increases throughout our planet more and more automobiles hit the road as the method of choice to get from point A to point B in our daily transportation needs. More cars, more need for fuel to propel the increased car population and therefore more pollution in our atmosphere and the enhancement of climate change and

global warming which are 'deleterious' to our planet's atmosphere. There are all kinds of scientific explanations as to the reasons for the effect on our planet's atmosphere, biosphere, etc. all of which affects our planet's climate change cycles and the global warming phenomenon.

"Well, let's see; I picked on automobiles but there are other sources of environmental contamination and one I can think of is our fresh water supplies. Industrial waste has introduced poisonous materials into our drinking water causing sickness and death to us human beings who are drinking it. Lead is an example of one of these deadly contaminants. Nuclear waste storage facilities have released radiation into the atmosphere and into our water supplies; and on, and on, and on.

"As the human population increases, the demand for water usage is increased to the point that we will have water shortages all over the world. The 3rd world countries are overpopulated and the food and water sources are becoming depleted to the point of 'non-existence.'

"The water supplies in these countries, where there are any, are contaminated with human garbage, feces and urine. This problem is being driven by the increased human populations. The human beings affected by the problems of scarcity of food and water are causing an enormous 'migration' into other parts of the world where they are bringing increased demands on the food and water supplies of the regions to which they are 'migrating' not to mention the diseases and cultural changes that they bring with them. This then creates social disorder, rioting, killing and just plain total social disruption of the regions where the citizens had been living relatively peaceful and productive lives.

"Human overpopulation causes all these problems. This is a hard problem to solve but if it isn't solved the world will end in revolution and the extinction of, not only the human species, but probably all species and all life on this

beautiful life giving planet Mother Earth.

“I didn’t present any solutions, but I think I’ve given you something to think about. Human overpopulation is the cause of most, if not all the world’s problems. There are too many ideologies, too many conflicting religions, too many humans seeking power, control and dominance over other human beings, too much vitriol, too much hatred and you can add more as I know there are more.

“There’s a saying I have always liked; “When I want your opinion I’ll tell you what it is!””

If you don’t want a Paris, France or San Bernardino event in your community, it’s time to call for a total “Immigration Shutdown Now.”

Call your senators and House rep: 1-202-224-3121. Demand a stop to all immigration and stop to any Syrian immigration.

Definition of slogan: “Immigration Shutdown Now means the American people want a total shutdown on all legal and illegal immigration. That means we want all illegal immigration stopped by arresting, prosecuting and jailing employers of illegal aliens. We deport all illegal aliens by taking their jobs away and as we catch them. We want English mandated as our national language. We demand a cessation of Muslim immigration in order to protect our culture, language and way of life. We can’t save the world but we can destroy our civilization. We demand a stable population that allows everyone to live, work and thrive into the 21st century. Especially our children.” FHW

That’s why you need to take action. Send this series to everyone in your network. Educate them. Urge them to take action by joining these websites to become faxers of prewritten letters and phone callers. We must force Congress into an “Immigration Shutdown Now!
