

Darwin, Freud and Marx: Pitiful Little Triune gods of Militant Paganism

By Lewis Brackett

March 30, 2025

God the Father, Jesus the Son, and the Holy Spirit are the sole and only triune God of creation. The word triune means three parts or three persons of the trinity, or perhaps both, which is, btw, an eternal debate within the faithful church.

When you deny God, you in effect make yourself little gods, and creating God in your own image. What we have in our society today are a lot of self declared little gods each competing for power and relevance.

Militant paganism is worshipping the creation as in the present “climate change,” “global warming,” and “mother earth /sustainable development” ideological narrative.

The French Revolution 1789/1800 resulted from the deliberate abandonment of Jesus and the Christian foundation of the rule of law, so that the most violent person could rise to power. This resulted in the infamous Terror, a couple of years where everyone representing the former government and the rule of law had their heads cut off.

The late nineteenth century saw the “Enlightenment” as a period calling Christianity superstition, and undermining the foundation of law and order in our society. This Enlightenment’s motive force was, and still is, the dim bulb

Hegel, who taught that civilization must be thrown into chaos and bloodshed in order to force the establishment of this violent New World Order.

All around us these militant pagans are mobbing in the streets, howling for our blood, and the final destruction of our Christian civilization.

Concerning the Principalities and powers indwelling these militant Pagans ... As Jean- Michael Angebort noted;

“Those who induced Germany to embrace the Swastika are not dead. They are still among us, just as they have been in every era, and doubtless will continue to be until the Apocalypse. National Socialism was for them but a means and Hitler was but an instrument ... That undertaking failed. What they (Demonic spirits / fallen angels) are now trying to do is to revive the Myth by other means.”

They will not have long to wait. Thankfully, neither do we. Any moment now we will be gone and the pagans coming ruler will have his day, his brief kingdom and lasting infamy.

So, Darwin Freud and Marx. Today we only have time to refute Darwin. Let the facts be submitted to a candid world:

Darwin Delusions

Darwin Contradict Causality causality is the cause behind creation. Nothing causes everything. So, first we have the delusion that Nothing causes everything. Lets look at that. In the pagan's narrative first there was nothing. Then this nothing blew up/ expanded/ created gas, dust, dirt. Then, this stuff happily got mashed together, and after a while we had big Macks and small fries ... and a coke.

Non reason causes Reason (self awareness or sentience)
Randomness causes Fine Tuning(if your car is idling rough getting better by ignoring it?)
Nonlife causes Life (a rock

somehow gets rained on long enough that it becomes a cat) (but why would you want one?) Chaos causes Ordered Complexity (an explosion in a car junkyard results in a line of brand new cars)? Unconsciousness causes Consciousness (nothing becomes the rock who does my taxes)

The River Systems of our world have not existed more than 5000 years. In the 1840s, General Humpfreys US Army Corp of Engineers dug some holes in the Mississippi Delta to find out how old the river was. By dividing the thickness/ size/ volume of the river deltas by the annual soil deposits of the river deltas by the annual soil rivers can be 5000 years old. Look at the earliest maps of San Diego Bay Evolution and Species Extinction Species are meeting changing environments. by being genetically selected for them.

This leads to the loss of many sub-species, However, genetic viability is being lost. endangering the long term survivability of each species in its ability to adapt to future changes. This is simplification of complexity, a devolution.

The Genetic Code Is an information storage system. To create this system, you must first have an immense intelligence to create a language; Then to create the system and Out of place objects A gold necklace found in a lump of coal. An iron spike found in a vein of silver. An Iron tool found on Scottish coal bed ... A metal bell found in solid rock in Ma.

Yellowstone and Grand Canyon Tree rings in layers of sediment show all the layers were deposited at the same time just a few thousands of years ago ... All the "fossils" are preserved whole showing they had been quickly buried in Noah's flood and not torn apart by Rapid coal formation as a result of the Mt Saint Helens eruption. Peat, the precursor to coal has already formed there. Hardening layers of sediment similar to the Grand Canyon with calcifying trees are obvious.

Darwin ignores ... Entropy/ Chaos Theory and the 2nd law of thermodynamics. icr.org / reasons.org/ yfiles.com/. answers in genesis.org

Truth is not a personal decision. Whether its true to YOU is irrelevant... Truth, like the law of Gravity, just IS There are two world views prevalent today. The first world views says "I believe "it" because its True" This has absolute laws of truth, math and physics.

The second world view is "Its true because I believe it". This second world view has no objective truth in philosophy or science.

The presupposition of evolution violates the most basic laws of Mathematical numbers theory; the law of of probabilities; as well as the second law of Thermodynamics which is the law of ever increasing chaos in all systems. This is most evident in the rapid decay of data in ALL information storage systems.

Genetic Drift, or Natural Selection

Every change makes the animal genetically simpler, and so is less likely to survive, which is the opposite of evolution.

Evolution insists that natural selection creates what is called "genetic drift". This process involves the selection of genetic traits in a species favorable to an environment with the loss of the genes not useful for existence in its environment.

If you have a heard of pigs let loose on an island, inbreeding and environment will over time simplify the genetic structure of those pigs to fit that environment... it has been shown that the genetic separation with other pigs not on the island will eventually be sufficient that the two groups of pigs cant be bread together.

However, each descendant of both groups will always be a

pig...not one descendant will ever be a dog or a cat! This shows that evolution always selects from Within a species. It does NOT create a whole new species. Pigs beget Pigs, Dogs beget dogs, Cats beget Cats.

Peppered Moths.

Every student of biological evolution learns about peppered moths. Here we have the same issue and cause. The dramatic increase in dark forms of this species during the industrial revolution, and experiments pointing to differential bird predation as the cause, have become the classical story of evolution by natural selection. The same careful scientific approach which established the classical story in the first place, however, has now revealed major flaws in it. It is time to take another look.

The peppered moth, *Biston betularia*, comes in various shades of gray. One hundred and fifty years ago, the species consisted almost entirely of "typical" forms, with predominantly light gray scales interspersed with black (hence the name, "peppered"). In 1848, a coal-black "melanic" form was collected near Manchester, England, and by 1950 melanic forms made up more than 90% of the peppered moths in that area. A similar change was reported in many other species of moths, as well as in ladybird beetles, spiders, and even some birds. Since the phenomenon was observed not only around Manchester but also near other industrial centers such as Birmingham and Liverpool, it became known as "industrial melanism."

In Every case "natural selection" by "genetic drift" results in a genetically simpler animal selected for a specific environment.

This result is the opposite of evolution toward a more genetically complex "higher" form of life.

This is Entropy in action. Entropy is ever increasing

randomness eventually resulting in total chaos. This is the 2nd law of thermodynamics. This entropy eventually causes extinction of species. It also causes old age, cancer, etc and death.

Intelligent design for everyone

“If it could be demonstrated that any complex organ existed which could not possibly have been formed by numerous, successive, slight modifications, my theory would absolutely break down.” –Charles Darwin, Origin of Species

With this statement, Charles Darwin provided a criterion by which his theory of evolution could be falsified. The logic was simple: since evolution is a gradual process in which slight modifications produce advantages for survival, it cannot produce complex structures in a short amount of time. It's a step-by-step process which may gradually build up and modify complex structures, but it cannot produce them suddenly.

Darwin, meet Michael Behe, biochemical researcher and professor at Lehigh University in Pennsylvania. Michael Behe shows, Darwin false through a concept he calls “irreducible complexity.” In simple terms, this idea applies to any system of interacting parts in which the removal of any one part destroys the function of the entire system. An irreducibly complex system, then, requires each and every component to be in place before it will function.

As a simple example of irreducible complexity, Behe presents the humble mousetrap. It contains five interdependent parts which allow it to catch mice: the wooden platform, the spring, the hammer (the bar which crushes the mouse against the wooden base), the holding bar, and a catch. Each of these components is absolutely essential for the function of the mousetrap. For instance, if you remove the catch, you cannot set the trap and it will never catch mice, no matter how long they may dance

over the contraption. Remove the spring, and the hammer will flop uselessly back and forth-certainly not much of a threat to the little rodents. Of course, removal of the holding bar will ensure that the trap never catches anything because there will again be no way to arm the system.

Now, note what this implies: an irreducibly complex system cannot come about in a gradual manner. One cannot begin with a wooden platform and catch a few mice, then add a spring, catching a few more mice than before, etc. No, all the components must be in place before it functions at all. A step-by-step approach to constructing such a system will result in a useless system until all the components have been added. The system requires all the components to be added at the same time, in the right configuration, before it works at all.

How does irreducible complexity apply to biology? Behe notes that early this century, before biologists really understood the cell, they had a very simplistic model of its inner workings. Without the electron microscopes and other advanced techniques that now allow scientists to peer into the inner workings of the cell, it was assumed that the cell was a fairly simple blob of protoplasm. The living cell was a "black box"-something that could be observed to perform various functions while its inner workings were unknown and mysterious. Therefore, it was easy, and justifiable, to assume that the cell was a simple collection of molecules. But not anymore.

Technological advances have provided detailed information about the inner workings of the cell. Michael Denton, in his book *Evolution: A Theory in Crisis*, states "Although the tiniest bacterial cells are incredibly small, weighing less than 10^{-12} grams, each is in effect a veritable microminiaturized factory containing thousands of exquisitely designed pieces of intricate molecular machinery, made up altogether of one hundred thousand million atoms, far more

complicated than any machine built by man and absolutely without parallel in the non-living world." In a word, the cell is complicated. Very complicated.

In fact, Michael Behe asserts that the complicated biological structures in a cell exhibit the exact same irreducible complexity that we saw in the mousetrap example. In other words, they are all-or-nothing: either everything is there and it works, or something is missing and it doesn't work. As we saw before, such a system cannot be constructed in a gradual manner-it simply won't work until all the components are present, and Darwinism has no mechanism for adding all the components at once. Remember, Darwin's mechanism is one of gradual mutations leading to improved fitness and survival. A less-than-complete system of this nature simply will not function, and it certainly won't help the organism to survive. Indeed, having a half-formed and hence non-functional system would actually hinder survival and would be selected against. But Behe is not the only scientist to recognize irreducible complexity in nature.

In 1986, Michael J. Katz, in his *Templets and the explanation of complex patterns* (Cambridge: Cambridge University Press, 1986) writes:

"In the natural world, there are many pattern-assembly systems for which there is no simple explanation. There are useful scientific explanations for these complex systems, but the final patterns that they produce are so (het der-rog-in-us) heterogeneous that they cannot effectively be reduced to smaller or less intricate predecessor components. As I will argue ... these patterns are, in a fundamental sense, irreducibly complex..."

Finally, we see that Darwinism is a self delusional religion of the willingly deceived; militant pagans indwelt by Satan's demons today, and destined for hellfire tomorrow.

Romans 3:16 there is none righteous 3:23 All have sinned/ 5:8 while we were sinners Christ died for us /6:23 for the wages of sin is (eternal) death, but the gift of God is eternal life through Jesus Christ our Lord.

10:9-13 That If you confess with your mouth the Lord Jesus, and believe in your heart that God raised Him from the dead you will be saved.

Meaning that You will be saved from the consequences of your sin which is eternity in hellfire.
