

# EMP Weather Attack Can Destroy Your Home & Vehicle

By: Devvy

June 23, 2023

An EMP attack can occur naturally: [Electromagnetic Pulse and Geomagnetic Disturbance](#): “Extreme electromagnetic incidents caused by an intentional electromagnetic pulse (EMP) attack or a naturally occurring geomagnetic disturbance (GMD), caused by severe space weather, could damage significant portions of the Nation’s critical infrastructure, including the electrical grid, communications equipment, water and wastewater systems, and transportation modes.

“The impacts are likely to cascade, initially compromising one or more critical infrastructure sectors, spilling over into additional sectors, and expanding beyond the initial geographic regions adversely impacting millions of households and businesses. For these reasons, the potential severity of both the direct and indirect impacts of an EMP or GMD incident compels our national attention.”

According to CISA (Cybersecurity & Infrastructure Security Agency): “Extreme GMD events associated with solar coronal mass ejections (when plasma from the sun, with its embedded magnetic field, arrives at Earth) may cause widespread and long-lasting damage to electric power systems, satellites, electronic navigation systems, and undersea cables. Essentially, any electronics system that is not protected against extreme EMP or GMD events may be subject to either the

direct “shock” of the blast itself or to the damage that is inflicted on the systems and controls upon which they are dependent.”

With all the geoengineering going on, could it affect what ‘s going on up high in the sky? I don’t know but I can tell you the spraying of our skies has been relentless for nearly 20 years. I let the doggies out around 6:00 am or so. Soon the sky is all beautiful blue. Around 9:00 am here comes the [spraying](#).

No, it’s not from commercial airliners. The Midland-Odessa International Airport is 60 miles west of me. This is white discharge, criss-crossing for several hours. Blue sky is gone and now a hazy, ‘cloudy’ blanket. I’m no scientist who studies the sun and oceans, but all this spraying cannot be good for humans, reservoirs and crops. What it’s doing to the atmosphere higher up – does anyone really know?

A major EMP terrorist attack if launched on the Eastern Seaboard would kill *millions* of Americans in a short period of time. No power likely for months and that’s not hyperbole. That means no way to fuel your vehicle, no heat or A/C, grocery stores would be cleaned out in an hour – if one could even get to a store. Can you imagine 8 MILLION people in NYC all scrambling to try to find food and water? Or the LA basin with 14 MILLION people? Hospitals, emergency resources, no power; the list is endless. Never mind getting your prescription filled or even getting to work.

Has the federal government done anything to address this real threat? On March 26, 2019, Trump issued an Executive Order: [Executive Order on Coordinating National Resilience to Electromagnetic Pulses](#) which pretty much covers everything. Every state in the Union has an emergency preparedness division which is a good thing but they also rely on electricity not wind mills or solar panels.

The Polar Vortex that hit Texas in February 2021, killed dozens including children. I was spared but my dear friends, also seniors, had no power or water for 5 days; uh, no toilet flushing, either. Water became gold in town. My brother's apt building had no water for 23 days.

[Texas Disaster – What Americans Need to Know](#), February 22, 2023 // [Renewable Energy IS Causing an Environmental Wasteland](#), March 1, 2023

An EMP attack by some rogue operatives from Iran or North Korea wouldn't be difficult to pull off considering the invasion at our border; it would be catastrophic. Who knows the real identities of the millions pouring across the border? Who knows what kind of mission terrorists from rogue nations are here for to pass back to their governments? What's America's weak spots? What's most strategic for an EMP attack?

[What won't work after an EMP event](#): "Vehicles with computers connected to the engine, anything connected to a charger, Main power grid, electric cars and battery-operated vehicles, computerized motorcycles, computer-operated houses, electric heaters, portable generators, public water (operated by electrical pumps connected to the grid), computers, pacemakers."

Add big box stores, grocery stores – any business where their electrical source is tied to the main power grid. [Electromagnetic Pulse: The Dangerous but Overlooked Threat](#) – "(EMP) event could wipe out the U.S. power grid—and along with it satellite ground stations, financial markets, healthcare systems, transportation networks, military command and control systems, and the technologies Americans rely on.

Several months ago, I happened to see an ad for EMP protection for your home, vehicle, motorcycle or even your boat. Oh, boy, some more research because I take the threat of an EMP

attack seriously, just like I did after the Polar Vortex that crippled Texas – I purchased a Westinghouse generator. OUCH to my wallet.

After looking at a few web sites, I focused on [EMP Shield](#). I knew very little about the technology used to protect your home from an EMP attack (weather or terrorism) but I sure learned doing research. EMP Shield's web site has a section covering Learn More and Installation. These are very serious people.

“EMP Shield is a family of incredibly robust EMP, solar flare, and lightning defense technologies.” Their product: Built to exceed military standards (MIL-STD-188-125-1), EMP Shield begins pulling excess electricity from the electrical system in less than 500 trillionths of a second.

“EMP Shield is designed to protect an entire home from Lightning, CME (coronal mass ejection, power surges, and an EMP (electromagnetic pulse). Proven and tested at Keystone Compliance, a Federally approved Department of Defense (DOD) testing facility, Our EMP Shield was struck with over 40x EMP strikes with no impact to the device.”

You can install the EMP shield or have someone help. Just like auto insurance, you may never have an accident, but if you do, that insurance policy can make the difference if you get sued or badly injured. Same for health care coverage. As my late mother used to say, don't be penny-wise and pound foolish. Yes, it's a financial sacrifice but the cost is actually pretty low considering what you're protecting: Your home – less than \$400.00.

I'm passing this along to my family members, although for a couple of them, it won't work. They live in apartments or other rental property. I suppose they could try to work with the property owner who should want to protect his/her investment.

I hope this information will be helpful so you can get prepared for disasters and, God forbid, a major EMP attack, weather or terrorism. Every time a really bad hurricane or tornado hits, I am thankful I've taken the time and spent my limited financial resources towards being a prepper because you never know when disaster will hit you and your family.

This doesn't mean a person should go crazy thinking any minute now, but rather *be prepared for the worst*. Have a plan. Those \$500.00+ fancy phones won't be of much use to save your bacon as they say. And you can't eat them. Be sure to share this information with family and friends.

As regular readers know, NWV's is almost 100% reader supported. They can't stay on line without financial resources. If you do decide to purchase from [EMP Shield](#) by phone **please mention NWV's**. They'll receive a small compensation which means a lot to keep NWV's on line. [Checking EMP's web site](#), it looks like they're still having a sale (and also looking for new affiliates).
