

# Has America Become Too Over Crowded?

In 2018, in our country, the United States of America, we desperately need a conversation-debate on where we're headed as a civilization. Do we want to add another 100,000,000 (million) legal immigrants, and countless millions more illegal migrants within the next 30 years by 2050? Because that's what's coming at current immigration rates! Or, do we want to create a viable and sustainable civilization for our children?

Everyone living in major cities finds themselves in constant traffic gridlock. They breathe toxic air with every breath. They cram themselves into crushing cookie-cutter tract housing. They live in concrete jungles in New York City, Chicago, Detroit, Atlanta, Miami, Los Angeles, San Francisco, Seattle, Dallas and dozens more. We're being poisoned by chemical-laced processed foods. As our immigration-driven population rises, we pay more for water, energy, sewage, food, goods and services. Our schools cost more. Our homes cost more. More and more of us degrade into a new lower class of Americans.

We're losing our ability to maintain our standard of living. We're losing our quality of life. We're losing our culture. With our high-speed society, we're losing our emotional, physical and spiritual balance.

As a leading voice in America to stop mass immigration, I invite you to take time out to send this "Press Release" to dozens of TV and radio hosts across the country. I intend to speak on "60 Minutes", NPR, PBS, NBC, ABC, CBS, FOX, CNN and all radio shows. Pass this request

on to all your Twitter, Google, LinkedIN and Facebook friends.

Has America Become Too Crowded?

**Guest Opportunity: Frosty Wooldridge**—Population-Immigration-Environmental Specialist, Political Activist, Speaking Expert as Seen on NBC and Author of **America on the Brink: The Next Added 100 Million Americans**

Should you be concerned that the demographic fact of America remains on course to add 138 million more people from 300 million in 2006 to 438 million by 2050—a scant 32 years from now?

We stand at 330 million as of 2018. The majority of population gain stems from legal immigrants, their children, birthright citizenship, diversity and chain migration. We face acute water, energy, resource and arable land exhaustion. Additionally, environmental breakdown, quality of life and standard of living degradation! Frosty has seen it all at 12 miles per hour. He has interviewed on hundreds of radio and TV programs concerning the future of America if we continue on our present course. Let him explain...

**Frosty Wooldridge** uses his experience to elaborate on the population numbers in America and what they all mean moving forward. Should we be concerned?

- ♠ What will another 138 million people added to the USA in the next 32 years mean for all American citizens?
- ♠ What will such numbers mean for water shortages since seven states face water shortages in 2018?
- ♠ How about energy exhaustion as to oil?
- ♠ What about exhaustion of resources?
- ♠ How about air pollution, gridlock and quality of life?
- ♠ How about the sociological conflicts caused by adding 100,000,000 (million) immigrants from 196 countries with 196 different world views, religions, cultures, languages and ethos?
- ♠ What about creating parallel societies now developing in

Detroit, MI, Miami, FL, Los Angeles, Chicago and Minneapolis?

♠ What about species extinction rates caused by increased 'ecological footprint'?

♠ What about degradation of the environment as to weather, air pollution, catastrophic climate destabilization?

♠ How can Americans pull in the same direction when 100 million immigrants pull in their directions?
