

Indisputable Proof That Donald J. Trump Won the Election

By Greg Holt

If Donald Trump won the election, where is the proof? Right here

Election 2020, a hotly contested subject. Many people are beginning to realize that the so-called *win* by Biden-Harris in the 2020 election was anything but; it was in all actuality a highly organized and carefully orchestrated theft on the grandest scale imaginable. I wrote back in November of 2020 that there is Overwhelming Evidence of Voter Fraud – Enough to Change the Election – and there is more evidence coming out every day, including the gamesmanship playing out in Arizona between the Senate and the Maricopa County supervisors as reported by my colleague Lyle Rapacki.

On election night Trump was ahead, *significantly* ahead. By 930pm on election night, it was already a statistical impossibility for Biden to win. Yet, all of a sudden, despite Trump's substantial margin, Biden was ahead and winning the election, how did this happen? Notice in the graphic below Trump's lead (top numbers) and then Biden's fraudulent lead – which occurred within 5 hours, in the middle of the night. Note also that this sudden leap forward for Biden *just by chance* happened in not one state or even two, but FOUR states, and ALL at the same time. Oh, and they were all *swing* states, but that's all just coincidence right?

	GEORGIA	PENNSYLVANIA	MICHIGAN	WISCONSIN
Lead Midnight 11/7	290,945	555,189	293,052	112,022
Lead 12/15	11,779	81,868	154,188	20,682

culated Press & Edison/Decision Desk HQ
and on state's time zone

Notice in the below image that Biden instantly received 23 times the votes that Trump did in Michigan. Not in hours, but in minutes. This is of course impossible.

Look at the above graphic where Trump was ahead by over 100,000 votes. In ONE vote update in Wisconsin, Biden leapfrogs ahead by some 20,000 votes. How can this be? Answer – it CAN'T.

One vote update in Georgia gave Trump 29,000 votes – the same update gave Biden 136,000 votes. Seeing a pattern here?

These abnormal, and unquestionably all but impossible vote count spikes gave Biden the win. Except that based solely on statistics, Biden could not possibly have received this many votes in so short a time, in so many states – at the same time. Neither could any other candidate – ever.

Have you ever heard of 100% of a particular voter precinct actually voting? Well, how about 150% – or over 300% of a voting precinct voting??? Well guess what? This actually *did* happen, in Michigan.

From [Kiwiblog](#):

“Russell Ramsland of Allied Security Group, LLC of Dallas, TX swore an affidavit concerning a detailed audit his company did on voting machines in Texas in 2018. He wrote in detail of the many serious security inadequacies of the software and then examined the 2020 Presidential vote count in a number of

counties in Michigan. He reported that over 3,000 precincts in the state of Michigan reported a vote count between 80 and 350% of registered voters. He lists a number of precincts in his report and in some cases a massive over vote. The vast majority of the precincts on the list were on or about 100%. The whole affidavit makes for interesting reading.

Note again the mention of Dominion, and particular software used to essentially rig the vote. It's not possible to obtain 350% of the registered vote, that is only common sense and only a fool would deny it.

The Kiwiblog post referenced above mentions other very interesting statistical details such as Trump being the first president in 132 years to have increased his vote total in his reelection bid, and NOT win reelection. I encourage you to read the article; it supports the case that the Democrats cheated – big time.

Judicial Watch reported finding 353 U.S. Counties in 29 States with Voter Registration Rates Exceeding 100%. Seems to me that these counties are fertile areas for vote manipulation.

Pennsylvania was another major playground for vote manipulation.

From Libertas Bella:

“What's more, Pennsylvania was another state where vote-counting was paused with the Vote Fairy showing up in the middle of the night to drop obscene amounts of ballots, all marked for former Vice President Joe Biden.

Two examples of such dumps were reported on by left-leaning Five Thirty Eight on their Twitter feed: 23,277 votes came in from Philadelphia, all of them for Biden. 5,300 votes in Luzerne County, which includes Wilkes-Barre, with nearly 4,000 of them for Biden. This was on November 4, the day after the election, when the number of outstanding ballots

miraculously increased throughout the day.

Another vote dump went for Joe Biden by a 92-8 margin, something that might have been plausible in Saddam Hussein's Iraq, but not so much in the United States.

Pennsylvania law does not allow for mail-in ballots to be counted in advance, which is rather convenient for anyone seeking to rig an election. Simply wait for the other side to count their ballots, then fabricate as many as you need to put your candidate slightly over the top."

It is worth noting here that the vote dumps for Biden in the above article were reported by a LEFTIST magazine.

Ever hear of *weighted race distribution*? Yet another way to manipulate votes, via – you guessed it, voting machines. It works like this: the candidate you like, well one vote for that person counts as one and a half, or two votes, because the voting machine is set to *weigh* the vote in whatever fashion a person sets it for. Conversely, the candidate that you don't like, each of his or her votes only count as half of one vote for example. All of this happens with none the wiser. Except that now these voting patterns have been caught by some sharp voting sleuths, like Dr. Shiva.

The votes are stored in decimal form, very easy to manipulate. Dr. Shiva also said that the process used by the HAMMER, which we reported on, used to allegedly manipulate votes is EASY to do.

In Wisconsin:

A data scientist who remains anonymous performed a review of the data in precincts in Milwaukee. His conclusion is very similar to Dr. Shiva's in Michigan in three counties. The more Republican the makeup of a precinct, the more votes that were taken away from President Trump and 'switched' to Joe Biden. Also, ironically these votes move in a linear fashion

which is very disturbing and highly, highly unlikely. The pattern indicates that these precincts were manipulated and votes were removed from President Trump and allocated to Joe Biden.

Over a period of days, more than a week actually, it was observed that the vote ratios between Trump and Biden in vote tabulation updates were *identical* – and this happened in more than one state. This is IMPOSSIBLE, there is no way that this could have naturally happened without any interference.

This happened in Florida, Connecticut, and Minnesota among other states. Again, weighted race distribution is mentioned by yet another source – Patriot Intel Report. Watch the video below:

[[Rumble Video](#)]

At the State Farm Arena on election night, election workers were supposedly all sent home. Except that there are five workers still present, and these workers are counting votes with some of the votes being counted *multiple times*. It's all on video. Watch at about the 5:45 mark in the above video.

How about the woman who was exposed by Project Veritas and busted by Texas law enforcement for harvesting votes for pay in Texas?

Now, in today's world, the Democrats and the media claim that all information published claiming vote fraud via voting machines (Dominion) or any other way is "dangerous misinformation."

It wasn't all that long ago that the Democrats and the media were claiming the very same things are (were) a problem!

"The principle of one person, one vote is the single greatest tool we have to redress an unjust status quo."

"We're right to be on guard against voter fraud. Voter fraud

would impinge on our democracy. We don't want folks voting that shouldn't be voting. We all agree on that. Let's stipulate to that, as the lawyers say."

Who do you suppose made the above statements? Barack Obama in 2014.

How about a letter from 4 Democrats stating that voting machines are not secure – in **2019!**

"The letter, sent Wednesday, calls on election equipment makers ES&S, Dominion Voting and Hart InterCivic to explain why they continue to sell decades-old machines, which the senators say contain security flaws that could undermine the results of elections if exploited."

Watch the above video which lays out the case that **foreign** countries were *without a doubt* involved in the 2020 election fraud. IP addresses accessed through Dominion machines connected to the Internet were shown to originate in Iran and China.

Even more suspicious, security logs for these machines for 2020 – are ALL missing. Now why would that be do you think?

There were also significant error rates in these voting machines.

From Amac:

"For example, while the allowable election error rate established by the Federal Election Commission (FEC.gov) guidelines is **1 in 250,000 ballots (.0008 percent)**, ASOG's forensic analysis **observed an error rate of 68.05 percent**, which is a significant and fatal error in security and election integrity." (Bolding mine)

There were also massive amounts of ballots that had to be adjudicated. What does that mean? It means the ballots cast are rejected, and then are sent to election personnel who then

make a determination as to who the ballots are credited to – or not. This is done WITHOUT supervision. Vote flipping is the obvious reason here. In the past, votes rejected were low, not anymore, this being just another way for the Democrats to cheat their way to the win.

Consider the following example:

“For example, in Central Lake Township, there were 1,222 ballots reversed out of 1,491 total ballots cast, resulting in an 81.96 percent rejection rate. These reversed ballots are sent to “adjudication” for a decision to be made by election personnel. When such a staggering number of votes require adjudication, the biggest problem includes integrity and chain of custody issues. It makes it easy to “flip” votes without any supervision en masse. In past elections, the rejection rates were so low, this was a minor risk, whereas now, it is a major risk and most likely one of the means of exploitation that took place to defraud one candidate out of a massive number of votes that would have been in his favor. The video below demonstrates how easy it is to cheat at adjudication:”

Mail-in ballots are another huge source of voter fraud. According to a Google search, this is largely untrue. On a Yahoo search, you at least see both sides of the story.

Like how 28 million votes went missing in the last four elections. Or a Democrat operative who says mail-in vote fraud is more the norm than not. These particular elections were overturned because of mail-in (absentee) vote fraud.

Thousands of poll workers and everyday citizens testified via affidavit to illegal activity at the polling places. In Arizona, over 20,000 mail-in ballots were received BEFORE they were even mailed – this also happened in Pennsylvania according to the Geller Report. There is ample evidence of voter fraud, and election fraud – yet the courts refuse to even HEAR the evidence. Voting laws were changed in many

states by state officials at the last minute – the problem is that having done this is *illegal*, only the state’s legislature has the authority to make these changes.

Anyone denying the existence of voter fraud in the U.S. should visit the [Heritage Foundation’s online voter fraud database](#), where they will find 1,311 proven instances of it – including 1,130 criminal convictions.

Remember how the Democrats insisted that in the 2016 election the only reason Trump won was because the Russians “stole” the election from Hillary? These same Democrats now insist that the 2020 presidential (and other elections as well) election was the safest and most secure election *ever*.

There can be NO doubt that the Democrats cheated, and cheated massively. The numbers of all kinds simply do NOT add up. The evidence that there was massive vote fraud is so overwhelming that it cannot even begin to be contested. I presented a ton of it here, and there is a lot more out there from many different sources.

That last sentence is key – there is evidence from many *different* sources. A source, or two, or heck even three maybe got it wrong. But not hundreds of sources.

The election was stolen, and Biden IS illegitimate. Trump IS the rightful president of the United States of America.
