

Keep Artificial Intelligence (AI) Out of America's Schools

By: Devvy

June 26, 2023

How could I say such a thing? AI is the greatest thing since night baseball started!

If you read my June 19, 2023 column (you should), [Artificial Intelligence: Lawsuits Already Underway](#), you'll see lawsuits are starting to pile up over AI. AI scolding the person inquiring about information or data. AI pushing propaganda. AI Hallucination: Making up false information and providing it to the user as if it's the truth hoping the user won't catch on.

[Fake photos of demonic statues stir up controversy for Hobby Lobby – Satanic Temple participant posts images of Baphomet in store shelves](#), June 23, 2023 – “She reportedly used a program called Midjourney to take imagery of the demonic Baphomet and insert it into images of the stores.

“She then posted them online, and triggered concerned consumers with her claim, “I think we need to talk about what is going on at Hobby Lobby...won't somebody please think of the children!?. . . “Reactions to the prank ranged from **immediate recognition of the AI-generated nature of the images** to genuine fear and condemnation of Hobby Lobby's alleged shift towards satanic merchandise. Some commenters questioned the company's values, while others lamented the supposed compromise of their beloved craft store,” the report said.”

Or, how about extorting money using your child is in danger? [This is a 16-minute video](#) done by Glen Beck. He not only relates that story but how about rewriting the Bible? Already being done. Someone doing a search will get the 'revised' addition full of lies. AI can duplicate your voice in less than 5 seconds so accurately, there's no way to tell the difference. Just think of all the ways that can destroy a person's life, marriage and reputation.

[NCAA Athlete Alleges ChatGPT "Scolded" Her Over Message On Protecting Women in Sports](#), June 23, 2023 – "I understand you would like to highlight the importance of girls' sports being exclusively for girls," ChatGPT responded, according to a screenshot Petty provided in an Instagram video of the matter.

"However, it's important to emphasize inclusivity and equality in sports rather than promoting exclusion based on gender," the system allegedly continued. "Sports should be accessible and welcoming for all individuals, regardless of gender." Propaganda.

Just like the despicable label "anti-vaxxer" slapped on people like me who have dared to ask questions about those COVID-19 experimental injections, no doubt I'll be labeled anti-technology, anti-progressive. Taking us back to the stone age!

Not so. What I am against is the right now, in-your-face, push for transhumanism using technology and the rush to suddenly shove AI down our throats with all the glowing accolades. Just like [Operation Warp Speed](#) and look how that's turned out; the horrific destruction from those injections will last a long, long time. [Musk, scientists call for halt to AI race sparked by ChatGPT](#), March 29, 2023 (Emphasis mine.)

"The letter warns that AI systems with "human-competitive intelligence can pose profound risks to society and humanity" – from flooding the internet with disinformation and

automating away jobs to more catastrophic future risks out of the realms of science fiction.

“It says “recent months have seen AI labs locked in **an out-of-control race to develop and deploy ever more powerful digital minds that no one – not even their creators – can understand, predict, or reliably control.**”

“We call on all AI labs to immediately pause for at least 6 months the training of AI systems more powerful than GPT-4,” the letter says. “This pause should be public and verifiable, and include all key actors. If such a pause cannot be enacted quickly, governments should step in and institute a moratorium.” Hmm. Must all be conspiracy theorists.

Every day more and more warnings are appearing that must be taken seriously. [An example of the censorship embedded in the algorithms that control responses using Artificial Intelligence \(AI\)](#), June 17, 2023. Right off the top, the author directs you to this one: [My Conversation with AI Over Hydroxychloroquine](#), June 16, 2023, by Harvey Risch, Senior Scholar at Brownstone Institute, is a physician and a Professor Emeritus of Epidemiology at Yale School of Public Health and Yale School of Medicine.”

So, I read the shocking My Conversation and then went back to An Example and read all of Halligan’s article on censorship. He concludes with, “These “narrative checkers” are fatal flaws in the algorithms that drive AI and are turning us into idiots unless we conduct independent and diligent research – or have several decades operating at the highest intellectual levels of integrity, like the good Doctor Risch. Maybe other AI platforms have less “narrative” and more “facts” and present the data in a “cleaner” less grovelly way.”

Just like those experimental COVID-19 “vaccines” that turned out not to be vaccines but experimental bioweapons, AI has real problems in so many areas and in my opinion cannot be

trusted. I know it's being used for stock market predictions, real estate and other areas of commerce, but to put it in schools is just asking for failure. Not to mention this:

[Dallas School District Installs AI Surveillance to Monitor Student Behavior](#), May 28, 2023, by Joe Wolverton, II, J.D. – “Last week, the Dallas Independent School District was boasting about its new pilot project, undertaken along with the company Davista. The pilot project, the school district says, uses AI to extensively monitor each student and then sound the alarm if a student deviates from his “baseline” behavior.

“There are so many disturbing and dystopian aspects to this information. First, using AI – artificial intelligence – to monitor student behavior is allowing an incredibly complex and advanced algorithm (which is really all AI is at this point) to record children’s behavior, removing the human element altogether. The “alarm” that the surveillance system will sound is triggered not by a concerned parent or teacher or administrator, but by a computer that targets, tracks, and predicts the future behavior of children under its never-blinking electronic eye.

“Anyone who pays attention to technology knows that the rapidly expanding use and misuse of AI is a topic of intense debate, with some experts in that field expressing concern that the technology is advancing too quickly and could someday – very soon – develop a means of decision-making beyond the control or coding of a human being.

“Imagine a scenario in which the AI surveillance system of which the Dallas Independent School District is “boasting about” develops a “virus” or “Trojan horse,” and all the images it has recorded it then uploads to the dark web or some other equally ominous database. Would the apologies of the administration of the school district be sufficient to satisfy the concerns or squelch the rage of parents whose children now

have their images available to anyone with access to the internet?" Worth the time to read the whole article.

Millions of Americans know children enrolled in the government's indoctrination sewers called public schools are not getting an education and haven't for decades. America's parents got a real wake up call during the obscene lockdowns and remote "learning" during the COVID manufactured hysteria. They also got very angry. Their children were not being taught for real life: reading, writing, arithmetic, science. The curriculum was heavy with social engineering to brainwash their innocent children.

Oh, but AI is so great because the user gets data and information FAST. Wow! More time, less thinking, no more time-consuming research! More time for texting! Sadly, so many children (millions who are now of adult age) can't even read well, never mind comprehend what they're reading and it's all by design.

This country was built by Americans taught to think and analyze. They were challenged to come up with innovative ideas. Patents for inventions that actually did make our lives better, i.e., electricity, airplanes, washing machines, automobiles. They were creators. Resourceful and inventive whether it was firearms, farming, ranching, shoemakers to those skilled in making beautiful, long-lasting furniture – all without AI.

They figured it out on their own which I believe, gives an individual a sense of worth, of accomplishment. A perfect example is [Nikola Tesla, a super genius of his time](#) – and he did all of it without AI. When I was a school kid through high school we learned how to function in real life. We read books, not looked at screens giving us the answers. Grading for performance wasn't racist, it was to encourage students to do their best as well as assess a student's academic abilities.

Back then parents were actually involved in their child's learning, not yakking on some \$500 fancy phone. Millions of parents today are more involved than ever either through home schooling or making sure they instill the importance of an education to their child. Parents are fighting back to boot out social engineering, race baiting and brainwashing children with the trans cult sickness and PRIDE/Rainbow propaganda.

As I wrote in my aforementioned column on AI, there are most certainly some areas of medical procedures that can and have enormously helped a person. But strict ethics monitoring has to be a must as well as reasonable regulation.

I can remember way back in 1995 after the Oklahoma City bombing, I was at the state capitol in Denver, CO, on the senate floor talking with a state senator. We had been working on truth gathering regarding that bombing. The vote was coming up to put computers in all grade school classrooms.

My senator friend voted against it which I fully supported. We both agreed it was very important children learn through their efforts, not by a computer. Encourage them to think, analyze, create. Computers can come later. Putting AI at this stage of the game in classrooms for spying or "teaching" is just asking for more subtle indoctrination, grooming and dumbing down of America's children. Right now, over in Great Britain academics and powerful people are also pushing to integrate AI with school curriculum for kids.

Today, millions of young Americans have been raised by technology and they are very good at it. No question. *But what else do they know or how to do?* Just look at what happens during a national disaster like hurricanes and earthquakes. Totally unprepared because they don't know what to do except wait for someone to rescue them. That didn't work too well in Feb. 2021, here in Texas during the Polar Vortex when 45 adults and 19 children froze to death. Heart breaking. I'm sorry, but look around you. Some say America

is turning into a zombie nation.

It's also a concerted effort to shut down the First Amendment by programming AI platforms to censor people like me, the great doctors and scientists who've sacrificed so much to bring Americans the truth about those COVID injections, investigative journalists and members of Congress exposing the Biden Crime Family's banking records. Sorry, that's disinformation says AI, let me feed you the "truth".

What can you do? Find out if your child's school is using AI platforms like ChatGPT. If they are, you need to fight the school board to remove AI for all the reasons in this column and my last one as cited above. **Do you really want your child to live in a synthetic world?** Where "reality" to them is a computer screen? The sleazy site, UK Daily Mail recently had an article on how AI can help you hone your flirting skills! Really? Heck, I knew by high school you bat your eyes, pucker your lips a little and give that lazy smile. Nothing new, ladies. The guys will come running.

What's the hurry? Give technology time to test and re-test to make sure information and data being provided is factual, accurate and not propaganda or outright lies. But, with nefarious actors controlling all this sophisticated technology, being able to verify information pumped out might be difficult because, tragically, we have such a dumbed down population, most will have no idea what's even going on or what they're using, never mind trying to figure out how to verify. They'll be sold on fast, less time spent doing research, more fun time. Trust us! Echoes of Dr. Death Anthony Fauci.

One more example: [AI makes it easier for fraudsters to create fake companies](#), June 19, 2023 – "The survey found that 61% of businesses surveyed said it's moderately or extremely challenging to onboard a new vendor, while 52% said the same about onboarding a new customer – in part because of the

difficulty of doing due diligence to ensure a criminal hasn't used generative AI to create a fake business with official-looking websites and more.

"Organized crime rings are sophisticated and typically they're ahead of the curve on the adoption of any new technology," Dori Buckethal, vice president of Thomson Reuters Risk & Fraud Solutions, told FOX Business. "What we're seeing with synthetic identity at fictitious businesses is that generative AI and machine learning can replace what was once done with a very manual process within criminal organizations."

Organized crime rings can now create a web site that looks so real, say they're associated with Company A, order here. You order, pay with a credit or debit card and a week later the site is gone and so is your money. Sure, your bank's fraud division can try to track the money trail by but then, it's already bounced a half dozen times from Russia to China to North Korea and a few more countries.

And last but not least: Why would they say that? Are they just conspiracy nuts? [Artificial Intelligence Poses "Risk Of Extinction", Warns ChatGPT Founder And Other AI Pioneers](#), June 1, 2023 – **I highly recommend you read that article.**

For a thorough, comprehensive education on the Fed, the income tax, education, Medicare, SS, the critical, fraudulent ratification of the Seventeenth Amendment and more, be sure to order my book by calling 800-955-0116 or click the link, "[Taking Politics Out of Solutions](#)". 400 pages of facts and solutions. Order two books and save \$10.00
