

Lahaina (Maui) Destroyed by Directed Energy Weapon – Round Two

By: Devvy

September 1, 2023

My last column, [Lahaina \(Maui\) Destroyed by Directed Energy Weapon – No Proof](#), brought an avalanche of emails. One man was so impressed he told me I was a piece off sh*t. Ah, anonymity of the Internet. Another wrote: “Do more research, please, before giving your conclusions.” He included two links for me to look at which I’ll get to below. Only 6 people so far insist it was a DEW. All the rest aren’t buying it.

Blockbuster: Irrefutable Proof Lahaina Was an Act of War: [Video shot from a sailboat offshore proves there was no wind on the ocean](#) from any hurricane and that the winds in lahaina were local only to lahaina. How could that happen? Weather mod.”

Winds of 80 mph were recorded inland that day on Maui in some places from Hurricane Dora; the average ranged from 60-75 mph. Do the research. Those high winds on Aug. 8th grounded planes from dropping water and fire retardants and knocked out power in many areas.

Winds were local only to Lahaina?

[At least 36 people confirmed dead in devastating wildfires:](#)

[Maui County](#), Aug. 8, 2023, 1:11 am – (Emphasis mine) “Maui County says 36 people are now confirmed dead in the devastating **wildfires that have decimated entire communities**, including historic Lahaina... Meanwhile, at least three large fires on Maui – including the blaze in Lahaina – are still active and out of control, which means a full picture of the devastation hasn’t yet come into view.”

[Dora-fueled winds whip up destructive brush fires, trigger evacuations](#), Aug. 8, 2023, 2:30 am – “Earlier in the evening, mandatory evacuations were ordered for residents on Lahainaluna Road, Hale Mahaolu and Lahaina Bypass. Several roads were also closed in the area, including Lahaina Bypass...The high winds mean firefighters can’t conduct water drops.”

No wind? We know many jumped into the ocean to save their lives. Seeing is believing: [Hawaii: Lahaina residents escape wildfires by jumping into ocean](#) and, wind anyone? [Maui residents describe diving into the ocean to avoid getting burned by wildfires](#) and this short video: [Maui wildfires: Survivors describe how wind “funneled” fire right into Lahaina](#)

THIS video is a must watch; it’s short. [New footage fuels speculation that downed power lines sparked Lahaina wildfires](#). Of course the reporter says, well, we don’t know but you’ll see while the reporter is interviewing a power line on the ground sparking a fire and it spreads from there. Not to mention the wind.

[WATCH: ‘The Biden Curtain’ goes up to block view of Hawaii Ground Zero](#), Aug. 28, 2023. The reporter let viewers know he’s made sure people on the mainland have the footage in case something happens to him. Something nefarious going on?

Ahem. State of Hawaii – Dept of Transportation: [Maui Crews Installing Dust Screen Around Lahaina](#), Aug. 25, 2023. Given the wind situation, debris – including potentially hazardous

materials – is blowing all over the place including Honoapi'ilani Highway (Route 30) and the Lāhainā Bypass (Route 3000). That work started on Aug. 16th and is meant to protect people driving on the Honoapi'ilani Highway. It is a massive clean-up effort and looking for human remains. Besides houses, there were restaurants, shops, 3 gas stations.

Dust screens are used on construction sites and even people's chain link fences. It's nothing new, but I learn something new every day.

[This is an interview with Dane Wigington](#) I mentioned above sent to me by a polite man which I hit on because a closed mind is a dangerous thing: Lahaina Incineration is Deadly WeatherWarfare – Dane Wigington. I have been aware of Wigington's tireless work on geoengineering and weather for several years. I respect his work, but disagree with him on this:

“According to Wigington, they used climate engineering to create a “wind tunnel effect right over Lahaina” with wind speeds up to 100 miles per hour to superheat the fire. Wigington explains, “This creates a bellows effect, and that escalates temperatures exponentially over what they would have otherwise been.

“They have been melting steel around the world by exactly that manner for thousands of years by feeding air in. That's the bellows effect. This is the same as an acetylene torch. If you burn just the acetylene, you have 1,500 degrees. When you add oxygen, now you get 6,000 degrees. People are not considering this. They don't need Directed Energy Weapons (DEWs).”

The human factor

This would mean “they” whoever they are didn't have a problem with deliberately creating a wind tunnel effect right over Lahaina. Get up in the morning. Today's mission is to murder

a few hundred or maybe even a thousand human beings and burn down an entire town. Go home, eat dinner and maybe watch some TV.

From that interview: “There is a 140-page U.S. military document that we found and posted at GeoEngineeringWatch.org. It is titled “Wildfires as a Military Weapon.” It describes surface preparation . . . prior to their commencement of the surface firestorm incineration.”

Okay. I found the same document (Emphasis mine.): [Forest Fires As A Military Weapon](#). Final Report June 4, 1970. U.S. Department of Agriculture, Forest Service. Advanced Research Project, Remote Area Conflict, ARPA Order No. 818. It is 171 pages.

“In late March, 1965, the 315th Air Commando Group initiated a fire-bombing raid, code-named Operation SHERWOOD FOREST, against the Boi Loi Forest, 25 miles west of **Saigon**. Although the raid was conducted ducted in the rain and did not result in any appreciable destruction of forest cover, the concept evoked considerable interest.

“In September 1965, CINCPAC requested that the Joint Chiefs of Staff take action to expedite the development of a device capable of destroying large areas of jungle or forest growth by fire.

“In December 1965, the Joint Chiefs of Staff by JCSM-862-65, requested that the Secretary of Defense initiate programs to determine the feasibility of dehydrating jungle growth to the point where such material would support combustion, and to initiate development of operational means for determining the specific conditions under which there is the greatest probability of destroying jungle or forest growth by fire.

“On December 20, 1965, the Advanced Research Projects Agency initiated ARPA Order 818 with the Division of Fire and Atmospheric Sciences Research of the Forest Service to conduct

a research program of environmental modification techniques (Project EMOTE). The program was concerned with basic flammability problems of the major vegetation types of the world: although specific emphasis was given to humid forests, **particularly the jungles of Southeast Asia**. The major objectives were to develop the knowledge and technology needed to:

“1. Describe, measure, and express quantitatively the flammability characteristics of forests and associated vegetation. 2. Modify flammability of vegetation types so that the fuel masses will readily support combustion. 3. Achieve rapid mass ignition and burning as required to remove each kind of canopy.

“The initial Forest Service effort was devoted to assisting the Commander in Chief, Pacific with a second operational test of forest burning, code-named Operation HOT TIP. This raid was conducted in March **1966** against Chu Pong Mountain in Pleiku Province. The results were sufficiently successful that an expanded program of research to develop operational criteria was pursued. Guide lined for future incendiary operations were published in June **1965**. At the same time laboratory studies were undertaken to develop flammability criteria for Southeast Asian fuels similar to those ready developed for forest fuel types in the United States, and climatic analyses of Southeast Asia were initiated in order to define the weather conditions most likely to contribute to successful incendiary operations.

“In January through April, **1967**, a series of three full scale operational tests, code-named Operation PINK ROSE, were conducted by the 7th Air Force against targets in War Zones C and D. **The results were no better than those of Operation HOT TIP, and the Forest Service advised against further operational testing in Vietnam.** §J” *End* Operation Pink Rose document is [222 pages here](#). Operation SHERWOOD FOREST and Operation HOT TIP [is here](#).

There are a lot of charts and graphs which I did not study. It wasn't just Viet Nam, testing was done in Malaysia and other countries. I would assume the U.S. had permission to conduct those tests. *It's all about forest and jungle fires during war times.* Types of trees, bark, how they burn as well as leaves and vegetation. There's even a Bible scripture in the report!

Dane could find out a lot by filing FOIA's for any 'wind tunnel' fire operations being conducted by the U.S. Department of Forestry, DoD, DARPA and HAARP here or abroad. We all know there are top secret projects going on we know nothing about. Are DoD and other alphabet soup agencies continuing those types of operations? When, where?

While that is cooking, put together his best A-game, documentation, videos and make an appointment to see his U.S. House rep as well as his state House rep and Senator. I was able to get an appointment with the Chief of Staff for my state rep when I still lived in Sacramento regarding chemtrails. [See here](#). Rosalind Peterson (God rest her soul) and I worked together on that but it was Rosalind who had already done the grunt work and had many official documents (like FAA) on the spraying. Her U.S. House rep. obtained them for her.

As I wrote in my last column, "they" – who? Names, organizations or DoD. Proof, evidence. Tell your U.S. House rep: We the People have a right to know if tests are being done causing a disaster like Lahaina. *Make it personal.* You have a family, too. It could have been you and your family on vacation visiting Lahaina.

UNLESS there's evidence as in emails, declassified documents it's all speculation. You just have to ask the right questions in your FOIA and make sure you give a copy to your reps and state senator – even if it's just their Chief of Staff. *Keep hounding lawmakers.* That's how you get hearings

and investigations. Remember the [Church Committee Hearings?](#) Pressure was put on them by enough people. [Americans 'Deserve Answers': House Republicans Launch Probe into Maui Fire Response](#), Aug. 30, 2023

First priority is saving lives. Next comes who's responsible. Lawsuits now filed can take years unless there's a settlement. [Maui County sues Hawaiian Electric over failure to shut off power lines despite warnings](#), Aug. 4, 2023.

READ: [Maui Electric responds to lawsuit, claims power lines were de-energized after Aug. 8 fire](#), Aug. 28, 2023 – “The utility released a timeline of what it claimed happened that day and has said that it has provided data to the Bureau of Alcohol, Tobacco, Firearms and Explosives, which is investigating the cause of the deadly wildfires.”

[Maui dodged catastrophe in wildfires five years ago but missed an opportunity to prevent future disaster, residents say](#) – “After fires in 2018, residents raised concerns about clogged evacuation routes, power line risks and failures to sound emergency sirens. “Everything we told them was completely, 100 percent ignored,” one man said.” Aug. 24, 2023

As I wrote in my last column: Gross incompetence, lack of readiness and stupidity, some I think are criminal negligence, contributed/caused so many deaths.

For a thorough, comprehensive education on the Fed, the income tax, education, Medicare, SS, the critical, fraudulent ratification of the Seventeenth Amendment and more, be sure to order my book by calling 800-955-0116 or click the link, [“Taking Politics Out of Solutions”](#). 400 pages of facts and solutions. Order two books and save \$10.00

Photo 1: Santa Rosa, (Northern California). Been through there many times. Oct. 9, 2017. Huge, horrible fire, but *why was no one claiming it was caused by a DEW or from creating a "wind tunnel" effect?* As you will see, they all look about the same as the Paradise 'Camp Fire' and Lahaina. Trees and some structures did not burn.

Photo 2 is also Santa Rosa. Vehicles incinerated just like Paradise, Calif., Lahaina, Washington State, NJ, Greece, Canada and other countries. Jumbo planes dropping water and fire retardants are critical but when they're grounded because of high winds, the damage is catastrophic.

Photo 3 is the 'Tubbs Fire' Oct. 8, 2017, Napa, Calif., wine country.

Photos 4 & 5: Yarnell, AZ, (North of Phoenix) June 28, 2013. 19 fire fighters were killed; ages 21-43; fire destroyed

nearly the entire town.

“...were outflanked and engulfed by wind-whipped flames in seconds, before some could scramble into cocoon-like personal shelters, as they were trained to do.” DM. That is forest, but no accusations of a DEW. Thankfully, overnight rain

helped get it contained.

Last one I could fit in this column, but anyone can look up wildfires, state, town. Talent, Oregon, September 11, 2020. News Channel, not Tampa Bay.
