

Robots: Think It's Great Technology?

Authored by Devvy Kidd not AI

October 28, 2025

My column [AI – Intelligence or Destruction?](#) Oct, 21, 2025, dealt with the so-called “Artificial Intelligence” tsunami and how it will make everyone’s life better, help governments, education, businesses and do wonders for everyone – not just here in the U.S., but the goal is every country on earth. If you didn’t read my column, *I urge you to do so as it’s not sci-fi, it is here now and has been for quite some time – long enough to now see the dangers –* just like those COVID-19 gene therapy injections sold by big pharma as vaccines which they are NOT.

AI is BIG money and has become a behemoth in the stock market. How nice. I’m sure their billions will fit just fine in their coffin when the only true God of the universe decides your time has come as no one escapes this life alive.

I explained that I make sure – in writing – that any doctor I see or testing I might receive I do NOT give permission to use AI for any of their services. If you read my column above, all NOT all roses. In fact, many believe AI to be demonic.

[Amazon deploys 750.00 robots, replaces 100.000 humans](#)

One thing I know to be hard fact is that AI is dangerous – especially in the medical field. Ran across an article by ARFFAA Law Group this past week: [Medical Malpractice Claims](#)

Arising out of the Use of Artificial Intelligence.

If you haven't watched the A+ movie, Stanley Kubrick's film **"2001: A Space Odyssey", 1968**, which centers on Hal, an artificial Intelligence computer, do take the time to watch as it will blow your mind because it is today. [This is a short clip of the hero trying to shut down Hal after Hal goes off the rails.](#) (4:56)

Many have compared an incident in Japan to the movie, The Terminator starring Arnold Schwarzenegger, a well-known womanizer and adulterer. Never seen one of his movies. RINO Arnold Schwarzenegger played governor when my late husband and I lived in California. Another foreigner buffoon who has never made a penny off me.

I refuse to use a search engine that uses AI. Haven't used Google for decades; Have never had anything to do with Apple. Just FYI, I use Freespoke.com which allows you to instruct: Do not use AI. There are many out there, one just has to do a little homework.

[Here Come the Lying AI Robots: Study Alerts That AI Systems Are Getting Adept at Deceiving Humans](#), May 13, 2025

[2025 State of Healthcare Procurement: AI, resilience and sustainability take center stage](#), Becker's Hospital Review (I subscribe to their free daily report) "Why 90% of healthcare procurement professionals are leveraging AI." Danger zone IMHO.

You see, in the move 2001: A Space Odyssey, Hal doesn't want to be shut down just like the robot in a widely watched video; the attack took place back in May 2025: ["Robot Snaps and Attacks": Shocking Footage Shows Humanoid Machine Turn on Handlers Inside Chinese Factory](#) – "In a shocking incident that has sparked widespread concern, a humanoid robot at a Chinese factory malfunctioned and aggressively turned on its handlers, highlighting urgent safety and reliability issues in the

rapidly advancing field of robotics...incidents like this are not isolated.

“In another unsettling event, a robot at a Lunar Festival in China unexpectedly lurched towards a crowd, causing panic among spectators. These occurrences highlight the need for comprehensive safety protocols and rigorous testing to prevent similar incidents in the future. As robots become more sophisticated, ensuring their reliability and safety becomes a critical challenge for developers and regulators alike.”

One of the big selling points which is turning sour is AI is so accurate, will help your business make more money and give you more time to “do the things you want” but never have enough time. The same selling point being used with the growing robot ‘population’.

Robots of all kinds have been around for decades and *have* been so very helpful in saving lives in some cases, i.e., bomb squads or hostage situations bring in the robots. That’s a good thing. Why, you can also have a robot with big boobs, mostly naked who talks to you and “wants to build a relationship with you”. Sick but growing in popularity, just like “blow up dolls” where you can talk and pretend to have sex with a plastic 10. (I mean who wants an “ugly” sex doll rated a 3?) [Companies are building robots to combat the loneliness epidemic and bring emotional support](#), Feb. 27, 2025

Oh, and let’s not forget the war industry. Robots used in war is “old news”, but combining them with AI is not to those in the war business\$. [Explosive-Laden Robots Pour Into Gaza City: ‘More Devastating Than Airstrikes’](#), Sept. 17, 2025. Next is to *rebuild the city* from the rubble – hide your wallet. [The use of robots and artificial intelligence in war](#), Feb. 7, 2020. Gives a very good historical recap on this issue but we’re now five years down the road. Quote:

“Demographic variables: Research has shown that accepting

robots as partners is enhanced when robots possess human-like characteristics ([Kiesler et al., 2008](#)). Examples of soldiers ascribing feelings like empathy towards their robotic tools have already been found. Therefore, it is critical to understand how robotic agents will interact with human teammates in future human-agent teams. Using metrics like personality type, age, and gender, agents could help determine whether a soldier is overreacting to a situation or playing it too safe.

“Research into using personality tests, demographics, geographical data, and psychographics for context-based purposes is a field that is recently gaining more traction ([Batarseh et al., 2018](#)). In a study one of us conducted ([Batarseh et al. 2018](#)), we used context-aware user interfaces to build an intelligent emergency application. The study used the Myers-Briggs personality type indication to ‘know’ who the user is and what aspects identify their personality. Individuals with a ‘judger’ personality were provided with a more structured format for the app; ‘perceivers’ were presented with a ‘dynamic’ format and so on ([Batarseh et al., 2017](#)). In a military setting, an agent could similarly use personality metrics to personalise its interaction with soldiers.”

How cool. A “hook up” with a soldier on the battlefield with a compatible robotic agent! Hopefully not one like Hal or the ones who attacked their programmers in Japan and other countries developing this wonder tool so you “have more time to do the things you like!”

Ahem. That’s all well and fine until the robot replaces YOU and there goes your paycheck to do all those things you wanted to do! Think it can’t or won’t happen? Hell, big cities are already using robots as receptionists as well as restaurants. Let me give you a few examples:

Video: [Tech expert says ‘we’ve got problems’ if new Chinese](#)

[robots can do this](#) – ‘The Cyberguy’ Kurt Knutsson discusses the creation of a robot in China that can reportedly build cars and do everyday tasks on ‘Fox & Friends Weekend.’”, April 27, 2025

When you replace a job held by a human being with a robot, no health care plans to wrangle about with employees/unions, on the job injuries, requests for a raise, sick days, maternity leave. Forget all that:

[Chipotle Starts Replacing Workers With Robots to Bypass California’s Minimum Wage Laws](#), Sept 22, 2024 (California did pass a minimum wage increase law a couple of years ago as the Comrades in their legislature along with gov. Gavin Newsom’s approval. Tens of thousands of jobs were lost fairly quickly and that’s no AI lie.) The “Democrat socialist” running for mayor in NYC, Comrade Zohran Mamdani, wants to raise the minimum wage to \$30 an hour. Oh now there’s a winning idea – just don’t get trampled as the city empties right along with restaurants, deli’s and so forth.

[Raise the Minimum Wage to \\$100.00 An Hour](#), Mine, Feb. 10, 2024

[Robots are taking over Uber Eats deliveries. Is your city next? Autonomous delivery robots are expanding](#) – here’s how they work and where they’re headed.” July 3, 2025. “People Keep Spotting These Weird Robots in Texas”: [Why Are Robots Quietly Taking Over Texas Sidewalks?](#) Aug. 3, 2025 – Delivering food workers: more jobs down the crapper. Jobs needed by college students to help pay tuition or a single mom, dead beat father and a couple of kids to feed so good-bye one of the 2 or 3 jobs needed to feed the kiddies and maybe pets.

[Can These Self-Flying Planes Transform the Skies?](#) – “Reliable Robotics is among startups hoping to revolutionize air travel by doing away with the need for human pilots on cargo, military and even passenger aircraft”, Oct. 9, 2025 (Oh, boy. I can hardly wait to book a seat!)

[The Robots are Coming We are “2 to 3 years” from mass adoption of robots – Elon thinks it could happen even faster.](#)

[Screw humans! Foxconn, many companies installing humanoid robots. No humans](#), video (Do read the comments section to see how American workers feel about this issue.)

READ this one. If it doesn't raise huge red flags then you're in denial: [Rise of the machines](#): “When robots go rogue – from humanoids that turned on handlers and attacked crowds to the factory malfunction that ended in worker's gruesome death (video), May 10, 2025 – “They were built to serve, programmed to protect, and designed to obey.

“But chilling moments captured on camera across the globe, show that machines meant to make life easier can go haywire – even occasionally turning on their human creators with shocking speed and force.

“From factory floors to festivals, there are moments that show [robots](#)[1] are not infallible. In 2022, a seven-year-old boy's finger was broken after a robot grabbed it during what was meant to be an innocent chess tournament in Russia.

“Three months ago, a humanoid robot lunged into a screaming crowd during a Chinese out-door concert, forcing security to drag it back from the barriers. And in 2023, a factory worker was crushed to death after a robot failed to differentiate him from a box of vegetables and pushed him against a conveyor belt. Experts have chillingly warned that as the lines blur between man and machine, these incidents may be only the beginning.”

Those who support the use of robots for just about everything will say those are just rare glitches. Certainly, some might but remember it's humans who do the coding and who is controlling that world?

READ the rest of that column.

Well, you get the picture. Robots are even milking poor cows. So, in a year or two you now have a country where a majority of jobs are now being done by robots so you can “have more time to do the things you want to do”. Yeah? Well, where’s the money going to come from to do all those things?

[All AI Can Turn Evil With One Code Word; Emad Mostaque Cofounder of Stability AI – Artificial General Intelligence Could Be Achieved By 2026; AI Will Replace All Jobs](#), Oct. 26, 2025 – “Mostaque discussed the concept of universal basic income (UBI) – for all those people who now are meaningless in the workforce as robots and AI can outperform them. He also explains that UBI cannot happen for if you give 1600\$ poverty level money to all these displaced workers you would have to pay 5 Trillion Dollars for the US population but due to the extreme debt of the US government there will not be any money. The total tax income of the US government is 4.7 Trillion Dollars.

“And supposedly all the people of the middle class that are no longer needed will be happy with 1600\$ per month. The greatest mistake people do, according to Mostaque, is that people think “This will not happen to me”. But it is already. If you have not read Future Shock – you should for your own sake and that of your children. I also highly recommend you read Ray Kurzweil’s book, because he discusses how nanorobots will swarm in humans blood and every human will be controlled by AI. I have shown that for years now extensively in my research. It is happening now.”

[“Understanding Future Shock And After Shock – The Technocratic Prediction That Common Man Will No Longer Understand Reality Due To The Exponential Pace Of Technological Advances”](#) Rest at link. (My note: Not all jobs but other than surgeons and highly specialized fields, sit back and enjoy your “universal basic income.”)

Creating, innovation, self-reliance – all built this country

with sweat and labor. Americans (not ILLEGAL aliens) derived a sense of accomplishment even if they complained about working in a factory. *PEOPLE were around other PEOPLE* during the day; families had big Sunday dinners and so on. I know because I've been at this 32 years. My late mother and I talked about social history (she died three years ago at age 93); her and grandma saw and lived through a lot.

Mental health care needs in this country have skyrocketed even before the COVID circus forcing isolation on children and adults; it will worsen if those ugly, disgusting robots take over our most important job sectors: ag, manufacturing, industrial. Millions just in this country will replace everyday workers. *No? Just wait and see because it's already happening.*

Our elderly have been left behind, lonely. Think robots at a rehab or assisted living facility can be compassionate, caring and listening to you? Some big, ugly chunk of metal and wiring? Think some programmed robot is going to bring them closer to family? Think again. **Those fancy phones have become so addictive for millions and millions of people, I sometimes think they don't even know how to communicate anymore with a real person.** Bring in legions of robots and see how that works out.

Those who support the use of robots for just about everything will say those "incidents" above are just rare glitches. Certainly, some might but remember it's humans who do the coding and who is controlling that world?

For a thorough, comprehensive education on the Fed, the income tax, education, Medicare, SS, the critical, fraudulent ratification of the Seventeenth Amendment and more, be sure to order my book by calling 800-955-0116 or click the link, ["Taking Politics Out of Solutions"](#). 400 pages of facts and solutions. Order two books and save \$10.00
