

Stop the Bird Flu Culling Madness

Authorized by Devvy Kidd not AI

February 24, 2025

Flashback. It is important to remind Americans now that they've seen the exposure by DOGE just how egregiously we've *been swindled and lied to for decades*. I'm revisiting this because high paid liars who claim to be reporters are "reporting" the current "bird flu" pandemic" is Trump's fault driving up the cost of eggs. *Yeah, three weeks after being sworn in as president; out of office 4 years made possible by election fraud and those same socialist cockroaches in the "Mockingbird media" who've lost all credibility.*

Dr. Sherri Tenpenny, DO, March 7, **2006**, [NewsWithViews.com](https://www.newswithviews.com/tenpenny/tenpenny060307.htm). Dr. Tenpenny is a highly intelligent woman and not some click-bait junkie.

"On February 27 and 28, 2006, I attended the First National Bird Flu Summit in Washington, DC. UN Senior Coordinator for Avian and Human Influenza, and special representative to the WHO Director General, Dr. David Nabarro, was the meeting second speaker.

"Nabarro repeatedly used confirmatory language regarding the arrival of the pandemic. At one point, he commented that systems need to be put in place so that they can be readily activated *when* the pandemic starts. Without hesitation, Nabarro repeated, note that I said *when*, not *if*, the pandemic

arrives. That's a really strong statement coming from an insider from the UN and the WHO. At the risk of sounding overly suspicious, it sounds like the outcome is predetermined."

[Enough already with the bird flu. Time to fish or cut bait](#), Dr. Sherry Tenpenny, Feb. 20, 2025: "Wyoming confirmed its first human case, bringing the total to 70 cases...across 13 states. Hardly a pandemic. Minnesota has "persistent" cases and now eagles AND owls are coming down with bird flu (because they're birds.)

"California lab workers are threatening to strike, and that could create a huge issue with the "pandemic" that state is experiencing. After all, Governor Gavin Newsom declared a statewide emergency (but notice how you didn't hear anything at all about bird flu in the midst of all the fires in Pacific Palisades and nearby areas.)

"Turkey will export 15,000 tons of eggs to the US given our shortage, which was created by the USDA. How? The brilliant idea for mass culling has failed spectacularly because H5N1 is still propagating in poultry flocks.

"Costs associated with the outbreak exceed \$1.4 billion. This sum includes \$227 million from USDA APHIS for indemnity payments to farms, some that have been infected multiple times with HPAI...Culling is reckless, unnecessary and actual facilitates transmission to humans."

Turkey? I know so many businesses need eggs, but Turkey is NO friend of these united States of America. Trust Turkish President Recep Tayyip Erdogan? When pig's fly. Sending us safe eggs? [Lead causes more U.S. recalls of China-made toys](#), August 22, 2007 – 300,000 of them for American children. Think the commies didn't know about the lead content? NEVER trust a communist. They always lie.

[Bird flu: Another Gain-of-Function Disaster?](#) Mine, Jan. 6,

2025

Must read so YOU know the Center for Disease Creation (CDC) and the FDA (Federal Death Administration) *are nothing but liars and pimps for big pharma*. Swine flu was considered a virus; H1N1:

[The US Swine Flu Epidemic That Wasn't](#), July 24, 2024 by Cheryl Attkisson Her original investigation was in **2009**.

“Instead of waiting, I decided to contact all 50 states and get the test results directly. About half of them provided the data promptly without issue. The other half balked and stalled, and I had to look at various state FOI laws, and remind the state health officials that they were required to produce the information. It was not theirs to withhold.

“First, I learned that officials in some states, including California, disagreed with the CDC’s directive to stop testing for swine flu. They did not want to be quoted by name for fear of “going against the CDC.” But they thought it was crucial to gather the most-hard data possible about a novel, unpredictable virus.

“Once I had the state’s data in hand, it was easy to see the big story: *There was no swine flu pandemic—at least in the US!*

“The people tested for swine flu or H1N1 prior to the CDC ordering a halt, were patients deemed most likely to have swine flu based on factors like recent travel to places that had a lot of swine flu at the time. Those specimens, my sources explained, should be nearly 100% swine flu if the CDC were correct in its assumptions about how widespread the virus was in the US.

“Yet the majority of specimens weren’t swine flu at all!

“I built a television news report giving the results of my investigation, had the story legally approved by my CBS

lawyers, and it was set for air. A top executive at CBS News commented to me that it was the most original reporting on swine flu he'd seen done by any news organization! But the story never aired on TV." Rest at link.

[Billions wasted on swine flu pandemic that never came](#), May 16, **2010** – “The second charge, prominently made by Dr Wolfgang Wodarg, the former head of health at the Council of Europe, is that the WHO is unduly influenced by the drugs industry, which stood to make a fortune from selling anti-virals and vaccines. The Swiss giant Novartis, for example, saw its profits jump by nearly a third in the first quarter of this year to \$2.95bn, much of it from delivering swine flu vaccines ordered last year.”

The American people were once again driven into fear and hysteria **over a lie**, but big pharma raked in the ca\$h with their swine flu vaccine.

Here we go again another outbreak of measles. [Measles cases are rising in the U.S. Do adults need a vaccine booster?](#), Feb. 21, **2025** – “A measles outbreak in West Texas is continuing to spread. And with kindergarten vaccination rates dipping across the country, more communities may be at risk of outbreaks.

“But it’s not just kids who should be vaccinated. Infectious disease experts say some adults may need to get revaccinated, too. “Measles can spread incredibly fast – it’s one of the world’s most contagious diseases, more than flu, polio, COVID, or just about any other infectious disease.

“Dr. Paul Offit, director of the Vaccine Education Center at the Children’s Hospital of Philadelphia, notes that just last week, West Texas was reporting 14 cases. This week, it’s up to 90 cases. “It’s very hard to control measles,” he says.

“The best defense against measles is vaccination. The vast majority of people getting sick in Texas are unvaccinated. And the measles vaccine is both safe and highly effective, says

Dr. William Schaffner, a professor of infectious diseases at Vanderbilt University Medical Center.” Sure, it is.

Flashback: COVID-19 Not a Virus: [Can Any Scientist Prove Dr. Stefan Lanka Wrong?](#) (Mine along with emphasis) July 12, 2021: (Very important information so please take the time to read.) “Dr. Stefan Lanka is a German biologist and virologist, although he has since shed the virologist category. A bit of history beginning in 2015. Dr. Lanka made headlines over in Europe after offering 100,000 Euros to anyone if they could prove the existence of the measles virus. WHAT?

[“Anti-Vaxxer Biologist Stefan Lanka Bets Over \\$100K Measles Isn’t A Virus; He Wins In German Federal Supreme Court,](#) January 21, 2017 – “By prophylactic vaccination of adults and especially children against measles, the pharmaceutical industry has earned Billions over a 40-year period. **The judges at the German Federal Supreme Court (BGH) confirmed in a recent ruling that measles virus do not exist though.** Furthermore: There is not a single scientific study in the world which could prove the existence of such virus so far. This raises the question of what was actually injected into millions of German citizens over the past decades.

“Five experts have been involved in the case and presented the results of scientific studies. All five experts, including Prof. Dr. Dr. Andreas Podbielski who had been appointed by the OLG Stuttgart as the preceding court, **have consistently found that none of the six publications which have been introduced to the trial, contains scientific proof of the existence of the alleged measles virus.**”

AND, this one: [COVID-19: Why Are American Scientists Silent on This?](#) (Mine) July 26, 2021 – “The gold standard for identifying a virus has been Koch’s Postulates which a lot of Americans now know about because of COVID-19. Hell, I can cite Koch’s Postulates in my sleep I’ve done so much research on this science. Koch, enjoyed fame as a microbiologist for

what became known as Koch's Postulates in identifying a virus. Friedrich Loeffler partnered with Koch for this *scientific discovery way back in 1884, some 133 years ago*. Not the first time this field of science was being developed. Koch and Friedrich leaned heavily on earlier research by a German doctor specializing in pathology and anatomy, Friedrich Gustave Jakob Henle...

"Apparently not because after that trial the only mention of it was nothing but smear pieces by media in several countries. Other scientists calling him a quack, anti-vaxxer and all the usual labels. Dr. Lanka is no first-year biology or virology student. He's been in his field for decades.

"It's been almost four years since Lanka's trial (not criminal, he prevailed) and I can find nowhere any scientific challenge by scientists either here in the U.S. or other countries to either prove Lanka wrong or that he is right. Why is that? The answer is simple: **Because it puts 133 years of "science" on its head.** Because we're talking gazillions of billions of dollars for vaccine manufacturers and research grants for labs and universities.

"I found this to be very helpful in distinguishing the difference between a disease and a virus: [Disease vs. Virus: What Is the Difference?](#) Under common diseases it lists cancer. Cancer is not treated with a vaccine. It also lists shingles. According to the CDC, shingles is a virus and conveniently, there's a vaccine for it. Rubella or German Measles aka the three-day measles is allegedly a virus. If Dr. Lanka's scientific research holds, they're not viruses, either. Quite a conundrum."

I, as well as my four brothers and sisters all got the measles growing up. We all had the MMR vaccine (*the last time I had any vaccine was by age 5*; have not had the flu in any form since Dec. 1993; refused shot and pills). (Measles, mumps and rubella and we all still got the measles. *Today who knows*

what's in those "vaccines".) We stayed home from school, got over it and back to normal.

As a former substitute teacher, I can and will swear to you, too many working parents – especially single *working mothers* consistently sent their sick child to school (baby sitter instead of day care which doesn't take sick kiddies). One 8th grader, a nice young boy had whooping cough. I immediately sent him to the principle; his mother had to come pick him up after the school nurse said send him home now.

Here we are again. It's the bird flu that's been making headlines (until the massacre in New Orleans) with MILLIONS of chickens and turkeys killed, **severely damaging making a living for our family-owned farmers and ranchers who feed us.**

I can tell you I'm still paying the same for free-range, cage free, non GMO organic eggs, 1 dozen, \$4.48 to 6.48 (depending on the seller with the lowest being HEB here in Texas) I was paying during the massive production called COVID-19. But, around the country, consumers have been shocked to see a dozen eggs cost \$10.00 because of the MASSIVE slaughter of chickens based on what?

I am not a doctor or scientist but I am FED UP with all this pseudo-science and all the lies shoved down our throats regarding viruses, outbreaks and GET THAT "vaccine". Using "scientific" proof that's 133 years old is beyond absurd.

[BREAKING – Peer-Reviewed Study Finds Current H5N1 Bird Flu Strain May Have Leaked from USDA Laboratory, Nov. 8, 2024 – “The McCullough Foundation study authored by epidemiologist Nicolas Hulscher, investigative author John Leake, and clinician Dr. Peter McCullough, was just published after successful peer-review in the journal, *Poultry, Fisheries & Wildlife Sciences: Proximal Origin of Epidemic Highly Pathogenic Avian Influenza H5N1 Clade 2.3.4.4b and Spread by Migratory Waterfowl*](#)

[New CDC Study Confirms Current H5N1 Bird Flu Strain is Very Mild; Mass Culling Results in Chicken-to-Human Transmission.](#)

Jan. 1, 2025 – “The CDC study titled [Highly Pathogenic Avian Influenza A\(H5N1\) Virus Infections in Humans](#) was just published in *The New England Journal of Medicine*:

BACKGROUND

“Highly pathogenic avian influenza A(H5N1) viruses have caused widespread infections in dairy cows and poultry in the United States, with sporadic human cases. We describe characteristics of human A(H5N1) cases identified from March through October 2024 in the United States.

METHODS

“We analyzed data from persons with laboratory-confirmed A(H5N1) virus infection using a standardized case-report form linked to laboratory results from the Centers for Disease Control and Prevention influenza A/H5 subtyping kit.

RESULTS

“Of 46 case patients, 20 were exposed to infected poultry, 25 were exposed to infected or presumably infected dairy cows, and 1 had no identified exposure; that patient was hospitalized with nonrespiratory symptoms, and A(H5N1) virus infection was detected through routine surveillance. Among the 45 case patients with animal exposures, the median age was 34 years, and all had mild A(H5N1) illness; none were hospitalized, and none died.

“A total of 42 patients (93%) had conjunctivitis, 22 (49%) had fever, and 16 (36%) had respiratory symptoms; 15 (33%) had conjunctivitis only. The median duration of illness among 16 patients with available data was 4 days (range, 1 to 8). Most patients (87%) received oseltamivir; oseltamivir was started a median of 2 days after symptom onset. No additional cases were identified among the 97 household contacts of case patients

with animal exposures...

“Last year, we highlighted the dangers of mass culling for bird flu in the McCullough Foundation production [*Bird Flu: Separating Fact from Fiction and True Danger from Fear-mongering*](#).” *Rest at link.*

[USDA Has Spent \\$1.25 Billion on Mass Culling for H5N1 Bird Flu—With Disastrous Consequences](#), Feb. 18, 2025 – “[Mass Culling Has Failed](#): Despite routinely killing the entire flock over an H5N1 bird flu PCR detection (41.4 million domesticated birds were culled in December 2024 and January 2025 alone), H5N1 continues to widely propagate among poultry:.. [Mass Culling is Not Necessary](#): Three studies demonstrate that a substantial number of chickens survive H5N1 infection and will thus obtain natural immunity against the virus, helping to limit future spread.” *Rest at link.*

The one statement I disagree with in that analysis: “The USDA must disclose the real-time RT-PCR cycle threshold (Ct) values used for H5N1 detection, end the unnecessary culling of healthy birds, and allow natural immunity to develop.”

We KNOW the PCR testing is a cheating game. PCR is a manufacturing tool that doesn't detect any “virus”. It duplicates a DNA sample. I was hospitalized in Feb. 2022 for pneumonia (which I believe I caught covering an event in Dallas). The toady, superior ER doctor told me I must have a COVID test. I told chubbs I have lifetime immunity. Don't take the test, there's the door.

A while later in he comes with a big smile: Oh, you have COVID-19 we're admitting you. Since I could barely stand up because of the pneumonia, I seriously couldn't just walk out and go home. They used a PCR test. Guess what? The cheerful nurse came in my room at dawn the next morning – we used a different test and you don't have COVID-19 after all! My response to her (politely): I told your ER doctor I didn't'. I

ordered all my medical records from the hospital for that 4-day stay and that ER doctor made ugly and untrue comments about me; fortunately, one of my best friends was there the whole time and she heard everything I said. After all, I'm just a conspiracy, anti-vaxxer nut.

[CDC Seems To Tacitly Admit PCR Tests Can't Differentiate COVID And Flu](#), July 29, **2021**: "Could this be why flu virus deaths decreased by 99 percent in 2020?"

"The Centers for Disease Control and Prevention (CDC) appears to have [tacitly admitted](#) that the near-universally used PCR tests *may not be able to differentiate between COVID-19 and common influenza viruses*, and is requesting that clinics adopt new COVID-19 tests that are able to differentiate between the flu and the China-originated virus.

"In a new announcement, the CDC declared that it *will withdraw its emergency use application for the controversial PCR tests on December 31, 2021*, and is urging clinics and hospitals around the country to immediately begin the process of using new tools better able to "*facilitate detection and differentiation of SARS-CoV-2 and influenza viruses*" because "*Such assays can facilitate continued testing for both influenza and SARS-CoV-2 and can save both time and resources as we head into influenza season.*"

"Many skeptics have noted that, with the emergence of COVID-19, flu cases diminished at a level that **strains credulity**. While the CDC **estimated** that between 24,000 and 62,000 died of "*influenza related illnesses*" in 2019, the [number shrunk by nearly 99%](#) in 2020, *to a modest 646 deaths.*"

Rest at link. The CDC (Center for Disease Creation) lied AGAIN. Have no fear! The FDA (Federal Death Administration) is looking into it. ['Without their knowledge': Unsuspecting Americans subject to top secret biomedical clinical trials](#), Feb. 4, **2025**: "A little-known rule of the Food and Drug Administration allows the government, pharmaceutical companies

and universities to bypass “informed consent” requirements when involving individuals in certain clinical research or trials for new drug approval.” Thank Biden and the DemonRats.

OUR hard-working farmers have suffered so badly because of the BIG FAT lie called climate change, cows farting; this round is the bird flu. I’ve watched heart breaking videos of chicken farmers who’ve had to slaughter their entire flocks – many in the thousands.

[Bird Flu Should Be the Subject of a Criminal Investigation:](#)

“Current discussion about the reality of H5N1 – i.e., whether it’s fact or fiction – ignores that the matter should be the subject of a criminal investigation, not merely scientific debate. The proximal origins of highly pathogenic avian influenza H5N1 Clade 2.3.4.4b may be the **USDA Southeast Poultry Research Laboratory (SEPR)** in Athens, Georgia and the **Erasmus Medical Centre in Rotterdam**, the Netherlands.

“Genetic evidence and historical context suggest that laboratory activities, including serial passage and GOF research, could have contributed to the emergence of H5N1 clade 2.3.4.4b. However, causation has not been established, and **further investigation is urgently needed** to confirm these findings and to identify all H5N1 laboratory leaks that may have occurred with a focus on mallard ducks and other migratory waterfowl, which have the potential to infect a large number of poultry and livestock facilities around the world. A moratorium on GOF research including serial passage of H5N1 is indicated to prevent a man-made influenza pandemic affecting animals and humans.”

[Fowl! Bird Flu: It’s Not What You Think](#) by Dr. Sherry Tenpenny: “FOWL! examines the specter of mandatory vaccination and exposes how pharmaceutical companies, chemical companies, and agribusinesses are not separate industries but function more as “sister enterprises,” working together for mutual benefit, profit, and power.

“Dioxins and other environmental chemicals are contributing to the toxic load in chickens, migratory birds, and humans, leading to massive death when combined with “bird flu” and other influenza viruses. However, this is far more than a book about the environment...

“Unflinching, thoroughly researched, and bound to be controversial, FOWL! will change forever perceptions of environmental policy, the pharmaceutical industry and the government’s role in the dissemination of public health information. Through Scientific documentation, FOWL! exposes how Health officials are deliberately inflating bird flu morbidity statistics to frighten the public. The pharmaceutical industry is using the bird flu to revive the vaccine business, and why the vaccine currently under development will not only be extremely toxic, but will almost certainly be the wrong one.

“Agribusiness has plans for the global elimination of independent farmers, forcing them into economic servitude and replacing their stock with genetically modified chickens.”

[Is It Time to Rethink the Culling of Poultry in Response to Bird Flu?](#) – The Trump administration plans to roll out a new strategy against the bird flu.

What can you do? Dial [Sen. Rand Paul](#) and [Sen. Ron Johnson](#) and request a criminal investigation into whether this bird flu strain is a result of GOF “research”– just like COVID. (GOF: Gain of Function and when the hell is all this “scientific meddling with our DNA and so-called research going to stop?) *I am not against science but I am against lying and developing bioweapons disguised as a vaccine (COVID injections), lab leaks endangering mankind. Stop the madness – in all countries.*

I know it’s difficult if you live in a huge urban area, but do what people did during the manufactured COVID hysteria: Go to

farmers markets, find farmers outside of town; question the seller company/farm, read the label for origin. One woman I know and do business with raised (she had to move last year) free range chemical free chickens and sold them for \$3.00 a dozen to her clients.)

Same for your state rep, senator and Attorney General. And, RFK, Jr. new head of HHS (unconstitutional) Health and Human Services with a \$1.7 TRILLION dollar budget). The U.S. Department of Health & Human Services, 200 Independence Avenue, S.W. Washington, D.C. 20201, Toll Free Call Center: 1-877-696-6775

(Last but NOT least. Was this column helpful? All the amazing research and commentary on NWV's by selfless writers? **Well, NWV's desperately need donations to stay on line** so if you haven't made a donation or become a monthly subscriber, [please do take the time.](#)
