

# That's a Wrap for the Year 2025

By Frosty Wooldridge

December 29, 2025

Do you ever look back on the year just passed? Do you remember any resolutions you made at its beginning? Did you keep them? Were you elated by some of the wonders you witnessed? Did some of the national and international calamities hurt you or disgust you? What were your positive impressions? What were your negative impressions? Did you live a good life in 2025? Are you thankful to still be alive? Did you live 2025 with thankfulness, gratitude and celebration?

As a writer, Clint Eastwood's "The Good, Bad and Ugly" all come to mind as I watch the tail-end of 2025. On the international front, I'm sick, sad, distressed, and depressed over the wars in Gaza, Ukraine, Africa, Asia and beyond. It stuns me that in the 21st century, many years after WWII, Vietnam, Afghanistan, Iraq, and wars in Africa--that the human race just keeps killing millions of its members through the decades. In my nearly 80 years on this planet, I have watched wars killing millions. In fact, here is what I said in my Christmas letter to my closest friends:

"Also, I'm sick of war. It's been going on for most of my life. I am saddened by that maniac Putin killing hundreds of thousands of kids in Ukraine. I'm sick of the war in Gaza where Hamas tried/tries to exterminate every Jew in the world just because of their religion. I'm sick of the killing fields of Africa. I'm really sick of that war-provoking religion:

Islam. I'm sick of all those young people who didn't get to live their lives and die of old age instead of bullets. I'm sick about the Korean War, Vietnam War, Iraq War, and Afghanistan Wars that killed millions of people who just wanted to live their lives. At this point, at this age, I am saddened that humanity couldn't find a better way for all living creatures, especially in the Natural World. We humans are killing Mother Nature's creatures at incredible extinction rates. Additionally, I'm sick of our young kids dying into the hundreds of thousands from consuming drugs that are SO available. We need better parenting, MUCH harsher laws against drug distributors. We need stronger education."

I'm totally sick to my stomach that Biden and Congress allowed 25 million illegal aliens to take up residence in our country, against our laws, against our language, against our culture, and against our way of life. What really ticks me off is that the majority of members of Congress did NOTHING to stop the invasion for four solid years. Even our mainstream media SUPPORTED the invasion. And now, we've got interior terrorists like Antifa, Muslim Brotherhood, and C.A.I.R. making huge inroads to invoke Sharia Law across our land in direct opposition to our own Constitution. And yet, few have the guts to stand up against the onslaught of Islam in America.

Heck, we've got Somalian refugee Ilhan Omar, penniless when she got here, used up our welfare, and now has swindled over \$30 million of our tax dollars into her bank account with the Minneapolis, Minnesota EBT and Medicaid fraud of over \$9 billion. Worse, Governor Tampon Tim Walz of Minnesota helped her defraud all of us by covering it up. He should go to prison along with the rest of them.

Then you've got thousands of illegal aliens gaining CDL's to drive mammoth 18-wheelers across our nation, stealing jobs from our truckers, and KILLING people because those illegals never passed a test to warrant a CDL. Worse, THEY ARE ILLEGALLY IN OUR COUNTRY. Yet, Governor Newsom in California

and other states don't give a crap about our citizens getting killed. There should be some heads rolling and prison sentences as to those individuals giving illegals driver's licenses to kill our citizens. For God sakes, illegals can't even read or understand what a "Stop Sign" means. I weep for those three American deaths in Florida and in California in the last four months. Their families are still crying and their kids are without fathers or mothers.

Not only that, immigration is killing our country whether it's legal or illegal. We don't need any more immigrants as we're already overloaded with over 350 million people and 25 million illegals, and another 1,100,000 legals this year and another 1,000,000 of their babies. When do we take a stand that America cannot continue on this "exponential growth" path?

For the life of me, I am still astounded, bamboozled, stunned and distressed over all the nut jobs in positions of authority that think biological men should be competing against girls and women in sports. And, they get to walk into young girls' dressing rooms with their "package" hanging out! It's the most asinine, moronic, stupid, insane and totally disgusting stance of the 21st century. Worse, we've California's and Maine's governors supporting that insanity. It's based on emotions rather than common sense and/or biology. It's based on denial of reality rather than facing reality. Those who support it are in need of mental illness health counseling.

Whether it's the U.S. AIDE fraud into the trillions of dollars or the EBT card fraud or the Medicaid fraud here and abroad—it's disgusting that our elected officials do not work for us, but they do work for bureaucratic financial fraud in multiple layers and places in those offices in "The Swamp" known as Washington DC. Like Ilhan Omar's "Miraculous \$30 Million" in her bank account, no one ever faces justice. Because she hates America SO MUCH, she needs to be deported for fraud and un-American activities. Personally, the AG Keith Ellison, a Muslim too, needs to be deported. Those jokers do

not possess an ounce of loyalty to our Constitution. Their only interest is installing Sharia Law.

What other things bugged me about 2025? We've got 774,000 homeless Americans and Veterans who are not being attended to with our tax dollars. Yet, we've spent over \$150,000,000,000.00 (billion) to house and feed illegals in 2025 according to NBC Nightly News (housing, anchor babies, schooling, free breakfasts and lunches, medical care, SNAP, WIC, ADC, and more). Our schools show less than 50 percent proficiency in reading, math and writing skills by our students. Note: you cannot teach kids with 20-30 different languages in a school, and every kid has his or her nose glued to a cell phone in class.

We're raising millions of kids traumatized by 7 hours and 22 minutes daily on their cell phones. Does anyone understand the long-term consequences mentally, emotionally, physically and academically with those figures? It means we're raising an entire generation of mentally deficient robots that lack the ability to read, write, relate to others, use critical thinking, sound judgment...and use of common sense.

At the same time, we just added, net gain, 3.1 million people to America in 2025. Again, we just keep packing millions upon millions more people into our country with no idea of the end result. As I've stated in the past, I would love to take every American over to China at 1.4 billion people or India at 1.44 billion people, and "see" what it means to individual lives of citizens of those countries. It means they are living with polluted air, water and soils. It means fewer and fewer freedoms. It means jamming people into 24/7 compacted stress, anger, frustration and multiple kinds of misery. Americans are not prepared for the next 100 million added to our country, but they are coming. So, I wrote in my Christmas letter:

"I have failed miserably in trying to alert America as to our ENORMOUS overpopulation predicament. Who wants America to add

another 100 million people? No one seems to understand the devastating consequences on multiple levels. My three books on America's overpopulation crisis will go down in history books when the historians write, "There was this teacher-world bicyclist who warned America of its impending crisis with human overpopulation...but no one listened...because if they had, America's future would have turned out as a thriving, uncrowded, sustainable civilization...but instead everyone ignored Wooldridge's documented predictions...and unfortunately, those predictions manifested and came to pass. Wooldridge wasn't the only voice...as dozens of Ph.D.'s wrote their own books about lack of water, energy, food, climate, pollution, and resources. Exponential growth (endless) could not be sustained...a price would be paid, and it would be steep...and it was..."

In this column of 1,000 words, I could only mention a few frustrations with 2025. I'm sure you could add dozens more from your own experiences. I can only hope that our future U.S. Senators, House Members, Governors and Mayors are smarter/more honest than Ilhan Omar, Jasmine Crockett, Maxine Waters, AOC, Hakeem Jeffries, Van Hollen, Shri Thanedar, Bernie Sanders, and the rest of that bunch up there in Washington DC.

Because if we keep electing those crooks or incompetent people across this nation, 2026 will be a repeat and we will see worsening conditions throughout America in 2026.
