

The Deliberate Dismantling of America: What We Face If We Don't Stop the Invasion

By Frosty Wooldridge

January 15, 2024

Part 3: The mounting consequences of importing millions of people into the USA

If we fail to stop Joe Biden's invited refugee invasion of America, most Americans are not prepared for what's coming. In 2024, most Americans take for granted MOST of their freedoms. They enjoy education from kindergarten through 12th grades. At least 20 percent enjoy college educations. Millions more enjoy vocational training schools. Most gain employment with choices of work into thousands of jobs. Most enjoy living in a three bedroom home or nice apartment.

They enjoy unlimited access to their National Parks. They enjoy limitless deer, duck and other game hunting. They enjoy lakes and streams for fishing or boating. Americans enjoy wide-open Interstate Highways. They enjoy endless fresh water. Most Americans enjoy breathing clean air, except if they live in large cities where they inhale toxic air 24/7, i.e., Detroit, Chicago, Los Angeles, Atlanta, Houston, Dallas, NYC and Denver's toxic Brown Cloud.

But that's all going to change within the next 25 to 30 years as Joe Biden and Congress invite a massive wave of refugees from around the world to the tune of 100 million more people,

added, net gain to the United States. As stated by government demographers, the USA remains on course to jump from 340 million in 2024 to 440 million people by 2050, give or take a few years. That's correct, we add 4.0 million, net gain annually, virtually all by legal and illegal immigration. If you want to see it on a 10 minute video, it will sober you as to what you or your kids face within 25 years.

["Immigration by the numbers--off the chart"](#) by Roy Beck

What you just witnessed WILL be your life and/or your children's lives in 2050 if we don't stop Biden's invasion of America.

What Other Negative Aspects Will You Experience in 2050?

With this invasion's onslaught of America, your "quality of life" will spiral into the toilet faster than a bullet train. That 100 million added people equates to doubling the populations of our 35 most populated cities. New York City will jump from 8.4 million to 16.8 million. That 11 million in Los Angeles area will jump to 22 million. Every city will become an air polluted, water-scarce, toxic waste-land with people jammed into every nook and cranny.

Question: how are you going feed THAT many people? How will you water them? How will you educate them? How will you provide jobs? How will you keep them warm in winter? How are your tax dollars going to pay for all their welfare food, clothing, housing, medical, educational and transportation need? Answer: those refugees will break our entire welfare system, our housing systems, our educational systems. One look at the Sanctuary Cities screaming to stop those illegal aliens will give you a taste of their stupidities.

Have you considered what's going to happen to our 63 National Parks? Have you considered another 100 million people trying to visit them? Are you prepared for the fact that they are already overrun, overwhelmed, trashed and overcrowded by T00

many people in 2024? Do you realize that there's a very good chance that you won't get to visit them because even a lottery system could lock you out? That's what Biden and Congress are doing to you and your family.

What about the roadkill rates? Do you know that American cars, boats, trains and planes kill 1,000,000 vertebrate animals every day of the year? That's 365 million fellow creatures trying to live their lives when they get chopped up, run over and ripped apart by our machines on the lakes, roads and airways of America. With another 100 million people in our country, the roadkill rate may/will jump to over 200 million daily. That's deer, elk, rabbits, bears, lions, hawks, owls, antelope, beavers, rodents, and thousands of other animals snuffed out by our human overpopulated numbers.

As it is, our wind turbines that create electricity chop up as high as 679,000 birds annually. **Another 988,000,000 birds are killed** by flying into our windows where they break their necks, annually. Common house cats **kill 1.4 to 4.0 billion birds annually** in the USA. Those cats also kill up to 6 billion small mammals, annually. Our country, at 340,000,000 people, plus another 48 million illegal aliens, abets the 80 to 100 species suffering extinction every day of the year. It's called "The Six Extinction Session." It's deadly and it is final for those species that cannot cope with our poisons, habitat destruction and outright murder by our machines.

Can you imagine what those numbers are going to be in 2050 with another 100 million people in America?

"Already the once sweet-watered streams, most of which bore Indian names, were clouded with silt and the wastes of man; the very earth was being ravaged and squandered. To the Indians it seemed that these Europeans hated everything in nature...the living forests and their birds and beasts, the grassy glades, the water, the soil, and the air itself." ~ Dee Brown, Bury My Heart at Wounded Knee

Have you thought about “catastrophic climate destabilization”? If it’s true, and if it’s descending upon our civilization like a deadly, invisible curtain, and if it’s caused by fossil fuel exhaust--how do you think it will be solved by adding another 100 million people? They will need to burn energy for transport, eating, housing, schooling and products.

What about those 100 million people arriving from incompatible cultures and religions? What about the Islamic terrorists? What about their world-views that are diametrically opposite to the American Way of Life? What happens when the Islamic Sunni’s, Shiites and Kurds arrive and are placed in close proximity to one another? Do you want to be in their Jihad against each other or us? How do you think our national cohesion will survive? Answer: it won’t. We will be a nation of conflicted strangers.

What happens when our water, oil energy and resources suffer exhaustion? If you read **Blink: Humanity’s 300 Year Self-Terminating Experiment with Industrialism** by Christopher O. Clugston, you will learn that our water supplies, oil energy and resources that allow our civilization to operate--will become exhausted. In other words, we won’t have the minerals, metals, water, and/or energy to keep this overloaded civilization operating.

Do you or your kids want to be around for that?

Have you heard about scientists placing an overload of mice in a box with plenty of food? Very quickly, they argue, fight and kill one another. Do you notice the 100,000 drug overdose deaths annually in the USA? They occur in cities where everyone lives on top of one another. Can you imagine those mental illness and drug overdoses with another 100 million people? What about the American homeless situation? Will another 100 million refugees solve that?

Please understand that I have covered a few items of what we face with an added 100 million more people. It's going to get much worse than anyone in America can comprehend. Once the numbers manifest, every single American faces massive social, economic, political, emotional, financial, mental and physical consequences.

If I could take every American on a two week tour of China or India, countries with 1.4 and 1.43 billion people respectively, there would be a national outcry to stop all immigration into America. Those two countries cannot solve any of their problems because of their enormous populations. We can here and now. We do not need NOR will we survive the current numbers being imported into America.

Please send this Part 3 of this series to all your networks. We must inform all Americans as to what future generations face if this invasion continues. Do it for your kids!
