

The True Science of Climate Change

By Ed Berry, PhD, Theoretical Physics, CCM

November 1, 2024

True experts are important. If German physicist Werner von Braun had not come to America after WWII, America would not have built the rockets that sent our astronauts to the Moon. Sometimes, a goal is reached because of only one person.

Below are selections of scientific publications and statements that summarize what we know about climate change. This selection does not include hundreds of good authors and their scientific papers that support the same conclusions as in this summary.

The authors below prove IPCC's climate claims are false. According to the scientific method, these papers override all papers that claim human CO₂ changes the climate.

To expand your knowledge about this climate truth issue, you would do well to read Brian Sussman's book, [Climate Cult](#), which reveals how the dark side controls what you think you know about climate science. And my book, [Climate Miracle](#), which includes what one reviewer wrote is the best explanation of the scientific method.

Harold Lewis, Emeritus Professor of Physics, University of California, wrote in his resignation letter to the American Physical Society, on October 8, 2010,

IPCC's climate theory "is the greatest and most successful pseudoscientific fraud I have seen in my long life as a physicist."

Ned Nikolov and Karl Zeller (2024);

The sun's Total Solar Irradiance and albedo (Earth's reflection of sunlight) fully explain all observed global warming since 1999. Albedo changes are by far the dominant driver of the Earth's global temperature. There is no evidence that human carbon dioxide emissions or changes in the carbon dioxide level affect the Earth's global temperature.

Chuck Wiese, Meteorologist (2023):

Change in the Earth's reflectivity (albedo) explains all temperature increase since 1984. The increased CO₂ level has no effect on temperature.

Howard "Cork" Hayden (2023):

IPCC's calculation for the temperature increase caused by doubling CO₂ is 4.5 times greater than properly calculated by the Stephan-Boltzman radiation law. The IPCC does not even use the Stephan-Boltzman radiation law.

Humlum et al. (2012) and Koutsoyiannis et al. (2023):

CO₂ changes follow temperature changes with a delay of about 12 months. Therefore, temperature change causes CO₂ changes, not vice versa.

Ferenc Miskolczi, Foreign Associate Member of the Hungarian Academy of Sciences (2023):

Global mean cloud cover, which controls the Earth's albedo, fully explains the observed mean surface temperature.

John Clauser, 2022 Physics Nobel Prize Winner (2024):

As much as it may upset many people, my message is the planet is NOT in peril. ... atmospheric CO₂ and methane have negligible effect on the climate. The policies the government has been implementing are unnecessary and should be eliminated.

The IPCC has misidentified the dominant process that controls the climate. Its models are based on incomplete and incorrect physics.

The dominant climate process is cloud coverage over the oceans. When cloud cover decreases, sunlight evaporates more water that causes more clouds that in turn cool the Earth, and vice-versa.

I can very confidently assert, there is NO climate emergency.

Edwin X Berry (2018, 2019, 2021, 2023):

Get over it. You are not causing global warming. Human-caused climate change is a mass delusion.

The climate myth assumes human CO₂ sticks in the atmosphere like garbage in a garbage dump. The truth is CO₂ flows through the atmosphere as water flows into a lake and out over a dam.

The faster the inflow, the higher the level. The higher the level, the faster the outflow. The level will rise or fall until outflow equals inflow. That level is the balance level set by the inflow.

Once you understand this simple physics, you will understand why human CO₂ has little effect on the CO₂ level.

The IPCC assumes, not proves, that human CO₂ emissions have caused ALL the increase in atmospheric CO₂ above 280 ppm.

IPCC's own data and the Climate Equivalence Principle prove this IPCC assumption is false. Human CO₂ emissions have an insignificant effect on the natural CO₂ level. Stopping all human CO₂ emissions will not significantly decrease the CO₂ level.

Carbon-14 data show human carbon emissions have no significant effect on the CO₂ level. Nature, not human emissions, controls the CO₂ level.

Richard Courtney (2021, 2024):

Berry's work is a breakthrough in understanding which I and all others failed to make. It indicates that anthropogenic emissions of CO₂ contribute a negligible proportion of the recent rise in atmospheric CO₂ concentration (2021).

Berry's analysis is the only breakthrough in climate science in the last four decades (2023, 2024).

Richard Courtney died on September 30, 2024, the day before his 78th birthday.

America needs more electrical energy.

Donald Trump proposes to double America's generation of electric energy to support the needs of America's companies the need this energy to power our future. This is not only an economic need. It is also a national defense need. If America falls behind in producing abundant, low-cost electrical energy, America will also fall behind in national defense.

This expansion of energy production will be powered primarily by natural gas until new developments in nuclear energy come online.

Climate fiction opposes America's energy needs.

Climate alarmists in Congress will oppose America's plan to

increase its energy production because it will be powered primarily by natural gas.

It's time to get rid of climate alarmists. Dunk their heads into a bucket of reality. Indoctrinate them into the world of true science.

Climate delusion cannot survive in a competitive world.

Republicans are just as much to blame for America's climate delusion as the Democrats. Republicans, as a group, believe in climate fiction as much as the Democrats do.

Republicans deny climate truth and refuse to even discuss climate truth with climate experts. They are wimps who do not have the courage to learn and stand up for the truth that would make us free.

Republicans are responsible for Montana's disastrous loss of the Held v Montana climate lawsuit in 2023. The Republican party boss forced AG Knudsen to purposely lose HvM. We could have easily defeated HvM and saved the world from the costs of climate fiction. More on this later.

The bottom line is we must eliminate climate fiction if we are to be free to quickly expand America's electrical energy production.

Climate fiction is destroying America's economy.

The scientific debate is over. There is no scientific basis for the government to regulate or try to control carbon emissions.

It is time for our elected officials, Republican as well as Democrat, to accept that human carbon emissions do not change the climate.

Climate fiction costs America more than America pays for its national defense. Many of these costs are hidden in climate

laws, regulations, tax incentives, carbon footprint regulations, and foot-dragging that stalls good economic decisions.

If Congress stopped its climate alarmism, we could eliminate America's annual deficit. We could revive America's economy, reduce or eliminate income taxes, and add true wealth to America. We could strengthen the US dollar, which is critical to America's survival.

America must remove all green energy incentives and let businesspeople, investors, engineers, and scientists make decisions without the illusion of climate change.

Congress must remove climate illusions from the economic playing field. Congress must not make business decisions because, as a group, they are not experts in making or micro-managing business decisions.

Let the businesspeople, not Congress, decide where green energy is more economical than natural gas, coal, or nuclear.

As a group, Congress does not represent America's smartest people.

Carbon Capture is irrational.

A back-of-the-envelope calculation shows that capturing all annual human CO₂ emissions would cost America more than its annual budget. Yet, Republicans support carbon capture.

Even if we could capture all human CO₂ emissions, we would accomplish nothing because natural CO₂ emissions control the CO₂ level. Stopping all human CO₂ emissions will not lower the CO₂ level to 350 ppm, which alarmists claim is necessary to save the world.

At a fraction of carbon capture cost, we could educate Congress and Americans about the truth of climate change. The

truth is the only way to solve the climate delusion.

Our food supply depends on atmospheric CO₂. We need more CO₂, not less CO₂. Stuffing CO₂ underground is like stuffing our food underground.

Population is not responsible for the CO₂ increase.

Bill Gates is supposed to be smart. He is smart in business and technology. But he does not understand atmospheric physics. He is as dangerous as the proverbial evil trillionaire in the James Bond movies.

Bill Gates' combination of unlimited money with insanity is dangerous to life on Earth.

Bill Gates believes he must reduce the human population so his kids can enjoy a world where the CO₂ level stays at 350 ppm.

Bill Gates believes he must create vaccines to lower the human population.

Bill Gates believes he must insert something into the Earth's upper atmosphere that reflects the sun's energy. He is insane.

Sunlight is not only the energy source that supports life on Earth. Sunlight is also the essential low entropy source we need to support human life. The Earth manages the amount of sunlight we need. Don't let Bill Gates play God with mother nature.

Climate fiction is destroying our freedom.

Our greatest enemy is not each other. The battle between Rs and Ds is a distraction.

Our greatest enemy is the World Economic Forum (WEF), deep state, Bill Gates, and other rich dudes who are working hard to control America and make us slaves who will "own nothing, go nowhere, eat insects, and be happy" by 2030.

WEF wants to own the world. They are rich. They are organized.

They believe making us slaves is the only way to save the planet.

Bill Gates is buying up US farmland so he can reduce our future food supply.

If we were smart, we would fight our common enemy, not each other.

Do you know the best way to stop WEF?

The best way to stop WEF and save our freedom is to spread the word about climate truth.

Organize meetings. Invite climate experts to speak or even debate climate alarmists.

Write articles for publication. Tell your friends.

WEF's plan requires the acceptance of climate fiction.

WEF needs dummies in government who will pass laws and regulations based on climate fiction.

WEF needs the climate laws to provide a legal way to control the people.

WEF needs a dumbed down population that believes in climate fiction to accept a degraded lifestyle, socialism, and a world government to "save the planet."

WEF needs to stuff people's brains with climate fiction to make them accept slavery and WEF control.

An expose of stuffed brains was on display in the Held v Montana climate lawsuit. Unfortunate brainwashed kids testified they are victims of dangerous climate change caused by human CO₂ emissions. Their indoctrination was successful.

WEF needs Republican traitors and party bosses to help WEF win climate lawsuits. WEF won Held v Montana in 2023 because Republican traitors helped them win.

WEF needs Republican Party bosses and attorney generals to censor climate experts who would prove in court that the claimed scientific basis of these lawsuits is imaginary.

WEF needs dumbed down voters to reelect WEF Republicans to assure WEF controls America during the next six years. They may have accomplished this in Montana.
