

Trump is right, election can be rigged and vote fraud is real

It is a sign of the times that the absence of meaningful ID requirements in many states leaves our voting process vulnerable to fraud and allows legal votes to be cancelled out by illegally cast ballots. –Virgil Goode

It is enough that the people know there was an election. The people who cast the votes decide nothing. The people who count the votes decide everything. –Joseph Stalin

Remember the Deal

Oh yes, there have been multiple stories about how the machines can be manipulated. Votes can be misrecorded, boxes stuffed, destruction or invalidation of ballots, hardware and software tampered with...there's dozens of ways to cheat the public and destroy a candidate chosen by the people.

And then there are double deals. That's where Republican Howard Baker got together with Democrat Robert Byrd, and Baker's sellout is still haunting America! See my previous article, [Voter Fraud, Thank Howard Baker](#).

In 1982, Republican Senator Howard Baker of Tennessee, entered into an agreement with Democrat and former Klansman, Senator Robert Byrd of West

Virginia. The agreement they made, in effect, barred Republicans from pursuing suspected cases of voter fraud without first getting a federal court's approval. This agreement is good until December 1, 2017. I highly doubt that some leader won't extend this insane arrangement for another 35 years.

Take note! Fortunately, this agreement does not bind GOP state committees.

Nehlen v. Ryan Primary

Absolutely voter fraud does exist. Look at the recent primary in Wisconsin where Paul Nehlen was leading at 49% to Ryan's 41%. [Paul Ryan had tanked](#)! Yet, we end up with Paul Ryan again, and with 76% of the vote. Something is definitely rotten in Denmark! [Here](#) is the Wisconsin approved voting equipment.

Businessman Paul Nehlen may have been swamped by House Speaker Paul Ryan, and perhaps voter fraud, in a Republican primary last week, but he's not done with politics just yet. The 47-year-old will now serve as chairman of a new political action committee supporting GOP presidential nominee Donald Trump.

Yes, Virginia, Vote Fraud Exists

[Roger Stone said the following on the Milo Yiannopoulos show:](#)

I think we all know, that in this day and age, a computer can do anything. These voter machines are essentially a computer. Who is to say they could not be rigged?" asked Roger Stone on the topic of voter fraud.

"There's a mathematician called Richard Charnin, a very eccentric fellow. Last time I met him he was wearing a ski jacket in 90-degree weather, he's one of those. He's also brilliant."

"He's a retired mathematician and he's a genius. He's written an extensive monograph on how every election in the state of Wisconsin (think Nehlen v. Ryan) in the last decade has been stolen, and you figure this out by comparing the polling, on a district by district basis, to the results, and then you'll find a swing that is mathematically impossible," Stone claimed. "In other words, you were losing a given precinct by four points, and then you'll win it by twelve. Such a swing is unlikely to say the least."

"The elections are rigged for one entity or another. So, who are the perpetrators? The perpetrators are the people who manufacture and sell these machines. The most common electronic voting machine, which is really just a computer, is a company called Diebold," Stone replied.

"Diebold's top executives and owners of the company are major donors to the Bush's. Is this a major factor on how George W. Bush quite improbably beat John Kerry?"

"I think we have widespread voter fraud, but the first thing that Trump needs to do is begin talking about it constantly," Stone said. "He needs to say for example, 'I am leading in Florida. The polls all show it. If I lose Florida, we will know that there's voter fraud. If there's voter fraud, this election will be illegitimate, the election of the winner will be illegitimate, we will have a constitutional crisis, widespread civil disobedience, and the government will no longer be the government.'"

"If you can't have an honest election, nothing else counts," he continued. "I think he's gotta put them on notice that their inauguration will be a rhetorical, and when I mean civil disobedience, not violence, but it will be a bloodbath. The government will be shut down if they attempt to steal this and swear Hillary in. No, we will not stand for it. We will not stand for it."

Check out Roger's latest article in The Hill, [Can the 2016 Election be Rigged? You Bet](#)

Hacking the Machines

A ragtag group of obsessive tech experts is warning that stealing the ultimate prize—victory on Nov. 8—would be child's play in the article, [How to Hack an Election in Seven Minutes](#).

We know there will be a strong attempt to steal this election.

As we've seen with both parties in this race, they are determined to keep the globalists in power, and will use any means to do just that. The following eight-minute video clarifies how very easily an election can be stolen. I strongly urge you to watch it.

Diebold accused this gentleman of foolishness, and apparent negligence, insisting that only authorized persons should test their systems for security. They said that the hack was equivalent to leaving your car unlocked, with the windows down and the keys left in the ignition.

However, scientists at Berkeley University confirmed the findings on this video. In fact, they discovered 16 further security flaws in Diebold's touch screen machines. Diebold claims they've updated their software to make it even more secure. They also insist that their electronic voting systems are more accurate than their predecessors. But we must ask, **"Why can votes be altered without leaving a trace?"**

The Diebold Machine Fraud

An [article in Politico](#) states,

Donald Trump's campaign is seeking to recruit "election observers" following the Republican nominee's repeated claims that the general election is ["rigged."](#)

In a move that's unprecedented in a presidential election, the campaign late this week launched a page on its website proclaiming, "Help Me Stop Crooked Hillary from Rigging This Election! Please fill out this form to receive more information about becoming a volunteer Trump Election Observer."

Unfortunately, what Mr. Trump doesn't understand is that most of the fraud is perpetrated by the voting machines themselves, and he had better be talking about it.

Despite many groups like True the vote, Judicial Watch, Defend the Vote, Show ID to Vote, and many others who work to allow only registered legal voters into the voting booths, these groups do nothing to validate that the machines are not programmed to spew out false results. The worst culprit machines are Diebold, and Diebold controls 40% of America's precincts, and again, they are major donors to the globalist Bush's.

Election observers are fine, but how do they know anything about the inner workings of the machines, and who has programmed them? In the documentary, [Hacking Democracy](#), which I strongly urge everyone to watch, it shows how easily it is for programmers to put malicious software into the computer that adds up the votes. Unfortunately, we do not have anyone who actually checks the validity of the very computers who tally our votes. How do we know the votes are even counted correctly by that same computer? This documentary states:

Inside the voting machine, there is not a person taking dictation as to our votes, but there are lots of people involved in writing the software, and lots of people who could have touched the software before it went into the machine. If one of those people put something malicious in the software, and it's distributed to all the machines, then that one person could be responsible for the change of tens of thousands of votes, maybe even hundreds of thousands across the country. That's a very dangerous situation.

It is a secret how these voting machines actually work. The companies that make them keep it a secret. None of the

computer scientists felt they could even look at the code, because the code was supposed to be a secret. The certification labs who examine it keep their process a secret of what they do. Even the election officials who buy the equipment are prohibited by their contract from ever looking to see how it works.

Conclusion

Proving our votes can be stolen without a trace culminates in a duel between Diebold voting machines and a computer hacker from Finland—with America's democracy at stake. "[Hacking Democracy](#)" has been broadcast many times on **HBO**, exposing the dangers of the voting machines used in America's mid-term and presidential elections. Electronic voting machines count almost 100% of America's votes in county, state and federal elections. The Diebold voting machines and their hackable software are still used today in twenty-seven states. The security holes and complete lack of transparency still pose an extraordinary risk to US elections.

Election officials need to be more demanding of the vendors as to the technical specifications of this equipment. The vendors are driving the process of voting technology in the United States. It would be far better if citizens were to select technology that satisfies their needs.

Unfortunately, Donald J. Trump can hire thousands of observers for each polling place, but they will never see the real fraud being perpetrated by the very machines which count the votes.

It is up to all of us to flood the polls this November, and to constantly talk about the fraud which has been proven over and over again with these Diebold machines. As always, our politicians will do nothing. We simply must demand that citizens select the technology we want, and without

computerized machines, and it is mandatory that Trump supporters get to the polls in droves.

Roger Stone's best advice, "The single best thing that the Trump people can do is to register a million new voters in the ten swing States. What I would do is take the margin by which Romney lost, double it. That would be my target for new registration."
