

# Urgent Warning: Livestock mRNA “Vaccines” Status

By: Devvy

April 24, 2023

The Internet has been burning up over the past few weeks regarding mRNA “vaccines” being given to cattle. But, what’s the truth?

[Cattlemen’s Group Denies mRNA Vaccines in U.S. Beef Supply](#), April 9, 2023 – “But Congress has removed country-of-origin labeling for beef imports, and China is already experimenting with mRNA technology on livestock, notes lawyer Tom Renz.

“The National Cattlemen’s Beef Association (NCBA) released a statement last week denying that U.S. cattle are receiving the COVID mRNA vaccine. “In a brief Wednesday statement titled, “NCBA Statement Correcting Internet Falsehoods About mRNA Vaccines in Cattle,” the NCBA claimed that mRNA vaccines are not *currently* licensed for use in the U.S. (Note: Then how did Shannon Cooper below double vax his cattle with mRNA technology?)

“There are no current mRNA vaccines licensed for use in beef cattle in the United States. Cattle farmers and ranchers do vaccinate cattle to treat and prevent many diseases, but presently none of these vaccines include mRNA technology.”

“But this doesn’t necessarily mean there is no mRNA product in the beef, or there won’t be in the future. Attorney Thomas

Renz warned that since Congress removed country of origin labeling on beef imports, the U.S. beef supply could already be tainted with mRNA product from the likes of China and other countries.”

“Surreptitious Insertion of mRNA Could Be in the U.S. Food Supply RIGHT NOW” (**Rest at [link.](#)**)

This is very similar to an article I wrote Dec. 14, 2005, [I Can Still Hear Their Screams](#). I’m going to make a point here in a minute.

“The men grabbed each cage off this huge truck and threw them to the ground – as high up as 30’. The cries of these adorable dogs and cats as they hit the ground sent me into shock. Several dogs and cats crammed into each cage, many already bloodied and many whose bones would break upon impact. I can still hear their screams.

“As I watched the video progress, I realized that I was crying. The screams of live dogs and cats as they were skinned alive, their big eyes begging for mercy and receiving none, ripped my heart out and brought incredible rage from deep down inside. The next shots of cat pelts laid on the floor with all the dead bodies still twitching in piles cast aside like garbage, would have driven someone with a weak stomach right to the bathroom. It hardened my resolve against trading with barbarians. I can still hear their screams.

“More pictures of dogs being chained – the worker jerking and tightening the chain while the eyes of incredible pain stared at the camera – prepared them for skinning, alive. I don’t know what sound you call dogs and cats as they are being choked and then a knife taken to them right then and there and skinned. To me, it was screams so horrific, I can still hear them two days after I watched the video.

“This is an everyday operation by “businessmen” who drive their trucks on the street like a produce truck would in the

U.S. It's estimated these barbarians skin millions of dogs and cats every year – while they are alive. As I watched these “workers” go about their barbaric practice, I wondered how Americans could continue supporting them with their consumer dollar? **That is Communist China in all its brutality.**

“The skinning of live dogs and cats is done for money. These barbarians sell the pelts and toss the “meat.” These pelts are illegally being intertwined with fake fur for many retail items being sold in the U.S., i.e., doll clothes and into fabric for human garments, i.e., parka hoods and sweaters. That's right: That Christmas gift sitting under the tree – if it came from Communist China – most likely is made from the fur of a dog or cat skinned alive. The EU refuses to ban this barbaric practice; it is condemned and illegal in the U.S.”

God has a special place in Hell for those savages. China uses other countries to facilitate moving certain animal fur to get around U.S. laws. Surreptitious: obtained, done, made, etc., by stealth; secret or unauthorized.

**Dying For Fur: A Report On The Fur Industry In China, Jan. 10, 2013** – “Investigators went inside of Chinese fur farms to ascertain the condition of animals on these farms, as China is the largest exporter of fur. This is the first report of its kind; the original report was conducted in 2004-2005 with updates made to the report in 2007. The investigation revealed that animals were kept in inhumane conditions and many were skinned while still alive; some animals remained conscious five to ten minutes after their skin had been removed..

“More than 95% of fur clothing produced in China is sold to overseas markets, with 80% of fur exports from Hong Kong destined for Europe, the USA and Japan. The country's expanding product range includes pelts, full coats, fur accessories, such as scarves and hats etc., toys, garment trimmings and even furniture. A random market survey in boutiques and department stores in Switzerland and London

discovered fur garments labelled “Made in China” among top fashion brands...

“Animals are often slaughtered adjacent to wholesale markets, where farmers bring their animals for trade and large companies come to buy stocks. To get there, animals are often transported over large distances and under horrendous conditions before being slaughtered. They are stunned with repeated blows to the head or swung against the ground.

“Skinning begins with a knife at the rear of the belly whilst the animal is hung up-side-down by its hind legs from a hook. A significant number of animals remain fully conscious during this process. Supremely helpless, they struggle and try to fight back to the very end. Even after their skin has been stripped off breathing, heartbeat, directional body and eyelid movements were evident for 5 to 10 minutes.”

Horrific, isn't it? It killed me to watch those underground videos by good, decent Chinese people who were trying to expose the truth about such barbaric treatment of helpless dogs and cats.

*So, could a mRNA vaccine be surreptitiously injected into cattle here in the U.S.? Well, read below because it's already been done. Where would the vials come from and are they the same for pigs? Since those junkyard dogs in Congress have removed country-of-origin labeling for beef imports, an mRNA “vaccine” could come from someplace like Communist China. **Never trust a communist because communists always lie.** China apparently has been experimenting on such a “vaccine”. Who knows how far along they've gotten?*

This one shocked me (hard to do after 31 years in the trenches) because Tom Renz doesn't throw conspiracy theories out there for click-bait headlines; video embedded:

[Beef Producers Panic Over mRNA Vaccine News](#), April 18, 2023 – “Last week, I reported that pork producers have been using

customizable mRNA-based “vaccines” on their herds since 2018<sup>1</sup> – without telling the public. This issue really only rose to the surface after attorney Tom Renz started promoting new legislation in Missouri (House Bill 1169,<sup>2</sup> which he helped write) that would require labeling of mRNA products.<sup>3</sup> In an April 1, 2023, tweet (and no, this was not an April Fool’s joke), Renz stated:<sup>4</sup>

*“BREAKING NEWS: the lobbyists for the cattlemen and pork associations in several states have CONFIRMED they WILL be using mRNA vaccines in pigs and cows THIS MONTH. WE MUST SUPPORT MISSOURI HB1169. It is LITERALLY the ONLY chance we have to prevent this ... NO ONE knows the impacts of doing this but we are all potentially facing the risk of being a #DiedSuddenly if we don’t stop this.”*

### **The Transhumanist Agenda and Its Focus on Food**

“The pushback by Big Ag lobbyists against this bill to require industry transparency on this important issue has been enormous, and one potential reason for that is because they’d have to admit that all sorts of foods may have been vaccinated with mRNA vaccines, have genetic modifications, or be modified to serve as vaccinations for humans...

“What’s causing significant confusion on this issue is a statement made by National Cattlemen’s Beef Association lobbyist Shannon Cooper<sup>17</sup> before the Missouri House.<sup>18</sup> Cooper told the House members he had recently “double-vaccinated” his herd with “vaccinations that have this mRNA.” According to Cooper, the mRNA “vaccine” given was for bovine respiratory disease.

“Is he confused? Did he mistakenly believe the vaccine he gave had mRNA in it? Or is the National Cattlemen’s Beef Association incorrect in stating there are no approved mRNA vaccines for cattle in the U.S.? Or, are experimental mRNA

shots being used without approval? Who knows at this point?"

Rest at link. **I highly recommend you read it because it should scare the hell out of everyone.**

Like the first article I cited at the top, this one also covers our Texas Department of Agriculture commissioner, Sid Miller, who "issued a statement promising to conduct a risk assessment of the technology before its adoption."

This week I will send Sid Miller a letter about how dangerous those mRNA gene editing technology shots are:

[Roughly 2 In 10 Cows Injected With mRNA Vaccines Die Instantly](#), Oct. 31, 2022 – "In an article for VaccineDeaths.com, Belle Carter reports that, "Dairy farmers in Australia are now being forced to inject the gene-altering mRNA vaccine that contains spike protein so they could remain in business.

"Just like in humans, the experimental jabs are causing severe damage to the animals and many of them died instantly. Independent media portal *InfoWars* recently reported that 35 out of 200 cows died immediately after being administered the injection. Analysts consider the mandatory vaccination of cows as a direct attack on food supply. Many of them are asking if the milk and other by-products would contain the spike protein that actually harmed the animals. 'Dairy herd DNA is altered. Milk is altered and you consume it. Butter constitution, yogurt, cheese and meat are altered. Will chicken and other meats be next?'

"Principia Scientific International (PSI), a legally registered company in the U.K. incorporated for charitable purposes, said in a statement posted on its website. According to the firm, all should be careful when consuming dairy products as well as beef products like burgers. PSI further suggested growing their own food and developing herds that are private, none tagged and never vaccinated. '

“Time to set up a community farm association with member farmers who are not part of the system, have herds or animals that are not jabbed or tagged so a community of private people can be consumers of organically produced livestock,’ it added. New South Wales (NSW) was the first to have cattle herds injected with mRNA.”

Since Congress removed country of origin for beef imports, their beef can easily end up in your grocery store – and maybe already is. There’s no time to waste. Next it will be chicken and I’ll end up a vegetarian. This will – not could – **will** badly hurt our ranchers because too many Americans now know the truth about those bioweapons. Putting mRNA technology into our food supply is criminal and those millions of us who know will not buy the meat, pork, turkey or chickens shot up.

It’s not enough just to write a letter to Sid Miller. I will follow up with phone calls until I get answers. Are pigs in Texas being given the mRNA experimental gene editing technology shots? Since those injections are illegal here in Texas, what are the safety protocols now in place to track cattle ranchers; beef or dairy? Are farmers and ranchers required to submit any forms regarding what vaccines they give any of their livestock?

Do include this in your letter, fax or email to your Ag Commissioner regarding the liars for hire in the “mainstream” media:

[Reuter’s Fact Check](#) – mRNA vaccines are distinct from gene therapy, which alters recipient’s genes, **August 10, 2021** – **“Vaccines that use mRNA technology are not gene therapy because they do not alter your genes,** experts have told Reuters after contrary claims were posted online.” Really?

Moderna & Pfizer’s SEC (Securities and Exchange Committee) filings and from Docket No. FDA-2021-N-0965 – Vaccines and

Related Biological Products Advisory Committee (VRBPAC)  
**September 17, 2021 Meeting**

“Moderna, Inc., the maker of another mRNA Covid-19 vaccine, acknowledged in their 2020 SEC filing(13)7 thus **“Currently, mRNA is considered a gene therapy product by the FDA.”** These vaccines might be more appropriately be described as “Gene Therapy Vaccines” (GTV)”. They still are considered a gene therapy product.

Of course, the problem remains is that those mRNA injections are not a vaccine. Gene therapy is not a vaccine. Those experimental injections contain no live virus. **“Gene editing is a group of technologies being used by scientists to change the DNA of an organism, such as human beings, animals...”** American Gene Technologies.

What’s going on in your state right now regarding livestock being given that dangerous technology? Yes, ranchers do use vaccines for certain diseases that plague cattle which is fine and essential for the industry. I have no problem with that as long as they are determined to be safe for human consumption. Just because they say USDA approved **means nothing to me considering all the lying by the FDA, CDC, Dr. Death Fauci and other “experts” on those C-19 injections.**

YOU have to do the same thing here in Texas or whatever state you live in because we can’t count on someone else to do it for us. Look up your state Dept of Agriculture and who’s the commissioner. Go right to the top and *don’t be satisfied with vague responses.*

HEB is the biggest grocery store chain in Texas; family owned. **The Texas cattle industry is huge;** we have several processing plants within our state. I want to continue being a consumer. I’ve always been a staunch supporter of grown and made in the USA, our fishing families, ranchers and farmers. HEB partners with farms all over the state; cattle and chicken from Texas

cattlemen and dairy farmers. [BUT](#): “Our Beef Buyer has shared the following about our Beef, “We do carry beef from Texas, just not under the HEB Organic (imported from Uruguay) and HEB Natural Grassfed (imported from Australia).”

They claim there’s not enough rain to produce grass year around in the U.S. and problematic for Texas to produce enough moisture content for grass growing all year. Fine, but I’m not buying. Now, is the pork, chicken and cattle you stock in your store “vaccinated” with the mRNA technology? [Here’s a sample of a letter](#). While I would leave out the Nuremberg references, it contains good information and source reference material. Condense it.

READ the label and **ask the person in charge of meat/chicken and pork** section where it comes from and are those ranchers using the mRNA “vaccines” on their livestock? Yes or no. You should do the same if you buy from China Mart aka Walmart. Silence is acceptance.

I quit buying all my meat (which isn’t a great deal since I’m a widow) and chicken from HEB and China Mart many years ago and gave my business to a real butcher here in town. We shouldn’t have to do this. That’s what we elect ag commissioners for in our state: Food safety is number one priority but how many of them or their staff/experts actually know what’s been going on with those COVID-19 mRNA experimental gene editing bioweapons?

**But, we have to and put a stop to it because once the genie is out of the bottle, it’s too late.** You’ve protected yourself and family from those c-19 injections and now they’re putting it in food. Priority vs importance, I always say.

For a thorough, comprehensive education on the Fed, the income tax, education, Medicare, SS, the critical, fraudulent ratification of the Seventeenth Amendment and more, be sure to order my book by calling 800-955-0116 or click the link,
