

Vaccines, SV40 and the Cancer Epidemic

By Kelleigh Nelson

July 25, 2023

*Spike is the most pathogenic protein in history. Damages: 1) heart 2) brain 3) causes blood clots 4) VITT MISC, and now is found to have the potential to cause cancer years after the shots by S2 inhibiting p53/BRCA and introducing **cDNA/SV-40** to the human body. Couldn't be worse! –Dr. Peter McCullough*

If all the insects were to disappear from the earth, within 50 years all life on earth would end. If all human beings disappeared from the earth, within 50 years all forms of life would flourish. –Jonas Salk, Developer of one of the first polio vaccines.

The (Covid) shots promote cancer through SV40 and they inhibit our ability to fight cancer by suppressing the tumor suppressor system. –Dr. Peter McCullough

There are more instances of the abridgment of the freedom of the people by gradual and silent encroachments of those in power than by violent and sudden usurpations. –President James Madison

If everybody is thinking alike, then somebody isn't thinking. –George S. Patton

Before exposing additional horrors of the Sars-CoV-2 injections, I need to clarify a section of my [last article](#). Mainstream and some alt-right media claim Tim Ballard is

promoting chipping of children. I asked a friend of mine who has met with Tim if he is for chipping children, and Tim said, "Absolutely not. We try to think of everything we can to protect them, but we don't want the government involved." Lies, lies and more lies to discredit Tim Ballard's work, Sound of Freedom and the truth of human trafficking and the global slave trade.

Actor Jim Caviezel responded to the legion of leftist attacks on the movie, "They're scared. Quaking in their boots. And it's because the public are listening to their hearts, which is what this film tells you to do. When there is evil, real evil in the world, and when love is in your heart, boy, evil is just a coward to God."

Demons hate the light of truth.

Simian Virus 40

SV40 is a monkey virus which stands for "Simian Vacuolating Virus 40" and was found to have contaminated some of the cells that the virus was grown in, specifically kidney cells derived from Asian rhesus monkeys.

The polio vaccine administered from 1955–1963 was contaminated with this virus essentially exposing 100 million people.

Most, but not all, of the contamination was in the [inactivated polio vaccine](#) (IPV). SV40 is a known oncogenic DNA virus which induces primary brain and bone cancers, malignant mesothelioma, and lymphomas in laboratory animals. Persuasive evidence now indicates that SV40 is causing infections in humans today and represents an emerging pathogen. SV40 causes cancer in two ways. First, SV40 promotes cancer cells. Second, it suppresses the body's natural defenses to cancer.

Microbiologist Kevin McKernan, a former researcher and team leader for the MIT Human Genome project, has discovered massive DNA contamination in the mRNA COVID shots, including

simian virus 40 (SV40) promoters. Dr. Sucharit Bhakdi explains in this [video](#).

On his Substack page, researcher McKernan explains exactly how other scientists and labs can rapidly and inexpensively reproduce his investigation, and [assess the contamination of covid shots for themselves](#). He's urging other researchers to check his work.

Peter McCullough M.D. tells us, "Besides variation in the amount of messenger RNA in it (COVID shots), there's contamination with cDNA. These are little fragments of DNA that come off the manufacturing process. And one of them is **SV40**. SV40 is a known cancer-promoting segment of DNA. And yes, they're in the shots. SV40 turns on cancer genes in the body. To make matters worse, the Spike Protein, the S2 segment, in a paper from University of Pittsburgh by Singh and colleagues, it impairs the tumor suppressor systems P53 and BRCA." [Link](#)

Dr. McCullough is not the only doctor sounding the alarm on soaring cancer rates. Idaho pathologist Dr. Ryan Cole has observed, along with his colleagues, cancers taking off and coming back "like wildfire" even in younger people.

Dissident physicians and scientists have told us that the C-19 injections inhibit the immune system which would leave us ripe for other diseases or infections, but now they've learned that the cancer-causing polio vaccine contaminate, SV40, is also in the Sars-CoV-2 "vaccines" adding an extra negative bonus.

Government officials and Pharma executives continue to deny any link between the admittedly-contaminated polio vaccines and the SV40 gene later popping up in people who never even got those jabs, and there have been several studies going back and forth. Yet, it is a proven fact that SV40 causes soft tissue cancers.

Polio Vaccine Contamination

Most Americans do not remember what a horror the polio epidemic was upon America. In the early 1950s, over 33,000 Americans were crippled or slowly died terrible deaths from polio each year. It was a virus spread casually that infected the lining of the intestines, then the blood stream, and finally the nervous system where it destroyed the victim's brain stem. The search for a polio vaccine became a national scientific effort supported by very powerful political forces. As a virus, it did not respond to antibiotics as bacteria do, so a vaccine was needed to stop the crippling and killing.

American scientist Jonas Salk came forward with a new idea to eliminate all three strains of polio. He would grow the live virus in a lab and then kill the virus and inject the dead virus into children. Being dead, they could not produce, but would create antibodies against the virus. Thus, the immune system would be armed against polio.

Safety Testing

Bernice Eddy was a bacteriologist at the National Institute of Health (NIH) and was told to safety-test the new vaccine. What she found was that the virus in the vaccine was not dead but still alive and able to breed. When she tried it on her monkeys, they were paralyzed. She sent pictures and warned the NIH.

Several prominent physicians stepped into the fray to state the vaccine was safe. One of these doctors was Dr. Alton Ochsner who was Dr. Mary Sherman's boss. To demonstrate his faith in the vaccine, Dr. Ochsner inoculated his own grandchildren with it. The mass inoculation proceeded on schedule and within days children fell sick from polio, some crippled, others dying. Ochsner's grandson died of polio and his granddaughter was crippled with it. The director of the NIH resigned; the Secretary of Health resigned. It was a huge failure by public health.

A second, safer vaccine was later developed and deployed by Albert Sabin and it used a weakened live virus. Everyone thought this would be safe. Bernice Eddy was removed from the polio studies, despite the fact that she was the one who warned them prior to the fiasco. She was transferred to the influenza section where she met Sarah Stewart who proved that some cancers were caused by viruses as well as discovery of [DNA recombination](#), which is a powerful tool in medical research today.

In 1957, Stewart and Eddy discovered the polyoma virus, which produced several types of cancer in a variety of small mammals. Polyoma proved that some cancers were caused by viruses. This started the study of cancer virology. This same polyoma virus acted very much like and is, Simian Virus # 40, a monkey virus that caused cancer.

The polio vaccine's manufacturers had grown their polio viruses on the kidneys of monkeys. When they removed the polio virus from the monkeys' kidneys, they received a number of the monkeys' unknown viruses. Eddy was afraid they'd inoculated an entire generation of Americans with cancer-causing monkey viruses.

She was right, and in October of 1960 gave a talk to the New York Cancer Society saying they had found the polio vaccine was infected with cancer causing viruses, SV40. From 1954 to 1963, almost every dose of polio vaccine produced in the world was given to 98 million Americans and was contaminated with the cancer-causing virus from the monkey kidneys used to develop the vaccine.

Instead of sounding the alarm, the NIH took away her lab and destroyed Eddy's career. Studies were repeatedly dismissed by federal health officials, so no warning was given to consumers. Other researchers found the same thing, albeit SV-40 did not cause cancer in the host (the monkeys), but what about a primate who had not been exposed to it previously?

When clean African monkeys were infected with SV-40, all of them developed cancer. The political insiders already knew this, but had not announced it.

The public was not told. Sound familiar?

In 1961 one of Eddy's co-workers published a paper that stated the polio vaccine was contaminated with live SV-40. A couple of very back page articles appeared in the New York Times with a mention of a possibility of cancer in the vaccine. None of the Salk or Sabin vaccines that were contaminated with SV-40 were recalled. They sat on shelves and were used until they were gone.

Coverup

But back to Dr. Mary Sherman who worked for Dr. Ochsner. Mary Sherman died on 21st July 1964. She had been stabbed in the heart, arm, leg and stomach. Her mattress had been set on fire, but her massive burns could not have come from the smoking mattress. The crime has never been solved.

She had been involved with a group of physicians to create a protocol to induce metastatic cancer into humans. It was in New Orleans where "The Project" was being developed. Prisoners were their subjects, and died shortly after being injected.

When Judyth Baker, a young college student, objected to Dr. Ochsner's injection of a disease-causing material into an unwitting subject, she was fired. She and her husband left for Florida, and this probably saved her life.

However, the real story of what killed Mary Sherman can be found [here](#). She died in her lab, working on secret projects when something with the machinery went terribly wrong. She may have been working on the weaponized virus, perhaps to make it so strong that the radiation overdose would not be necessary for successful carcinoma implantation. Or perhaps

she was working on the still hush-hush project to create a vaccine for wild-strain SV-40 infection, the dangers of which were being downplayed to the public by the NIH.

Nevertheless, she was so damaged that someone put a knife in her chest to kill her and her body was moved, perhaps for national security.

Edward Haslam published [Dr. Mary's Monkey](#), in 2007 and argues that Dr. Alton Ochsner organized "one of the 159 covert research centers which the CIA had admitted to setting up."

Haslam believes that Ochsner recruited the brilliant researcher and physician, Mary Sherman, to run the research operation. The project was set up 23 March 1962, and Dr. Sherman was allegedly involved in carrying out secret research into developing a vaccine to prevent an epidemic of soft-tissue cancers caused by polio vaccines contaminated with SV40.

The SV40 Cancer Epidemic

Dr. Eddy's forecasted epidemic has come true. In a 1994 article published in the Journal of the American Medical Association, the front page of USA Today stated, "Baby boomers are much more likely to get cancer than their grandparents were at the same age." They even stated that men born between 1948 and 1957 have three times as much cancer as those born in the late 1800s.

These affected Americans are the baby boomers who were inoculated with the polio vaccine. The polio epidemic caused 33,000 cases a year at its height. Compare that to the number of cancer cases in 1994, 182,000 new cases of breast cancer, 200,000 new cases of prostate cancer, and 500,000 new cases of lung cancer. The increase in any one of these diseases in the years since 1985, when baby boomers who were inoculated turned about age 40, was greater than the entire polio epidemic at its peak. Increase in soft tissue cancers is at 50%, this

includes skin at 70%, lymphoma at 60%, prostate at 60%, and breast at 34%. And these figures are before the C-19 injections.

There is abundant evidence of a variety of simian viruses found in the human blood supply. The DNA from SV-40 is repeatedly extracted from several types of tumors. Former virologist, John Martin, M.D., Ph.D., said, "SV-40 infection is now widespread within the human population almost certainly as a result of the polio vaccine." This vaccine was given to millions of American and European children. SV-40 has been discovered in tumors of children never inoculated with the vaccine, leading most scientists to believe it is genetically passed.

Researchers have found SV-40 in 45% of the seminal fluid samples and 23% of the blood samples from healthy donors. That meant that SV-40 could have been spreading through sexual activity, from mother to child, or by other means which could explain how those never inoculated with the contaminate vaccine could pass it on or infect their children and grandchildren.

Mesothelioma is a rare cancer. Few human cases were reported before the 1950s, but its incidence has been increasing steadily, reaching several thousand cases a year in the United States by 1988. Studies had linked mesothelioma to asbestos exposure – with tumors usually appearing many decades later. Yet 20% of victims had no asbestos exposure. One of the researchers decided to test 48 human mesotheliomas stored at the NIH. He was stunned to find that 28 of them contained SV-40.

The final and most horrific part of the story reports that Lederle Laboratories, bought by Pfizer in 2009, the sole oral vaccine supplier in the U.S. from 1977 onward, continued to use monkey kidneys possibly infected by the SV-40 virus in its manufacturing process until oral polio vaccine was removed

from the market as late as January 2000.

So, the damage from the vaccine for polio has had a widespread effect on all of the population, and my mind immediately thinks of the elite and powerful who believe in population control. Why didn't they stop the inoculations? Why wasn't the public warned? Why didn't they find a better way to grow the vaccine without the contamination from rhesus monkeys? Why wasn't a vaccine against SV-40 found as soon as possible? As the inoculated baby boomer population ages, and their immune systems become compromised, SV-40 is most likely to step in.

Conclusion

Today we are facing another horrific tragedy via the Sars-CoV-2 injections. The adverse effects are gruesome, horrific cancers thanks to SV40, sudden death, heart attacks, myocarditis, pericarditis, infertility, Guillain Barre, massive blood clots etc. etc. ad nauseam, and a huge recurrence of acquired immunodeficiency syndrome from what is referred to as VAIDS, "Vaccine induced AIDS" caused from the Sars-CoV-2 injections.

The totalitarians, who consider us the unwashed masses, the useless eaters, and their slaves, care not how many are lost as we're thought of as their guinea pigs.
