

Why Countries and Some Cities Ban or Restrict 5G

By: Devvy

August 5, 2024

“Unless we put medical freedom into the Constitution, the time will come when medicine will organize into an undercover dictatorship to restrict the art of healing to one class of Men and deny equal privileges to others; the Constitution of the Republic should make a Special privilege for medical freedoms as well as religious freedom.”

[Benjamin Rush, M.D.](#) “...elected to the Continental Congress in 1776, was a signer of The Declaration of Independence, served as a surgeon in the Continental Army during the American Revolution, and later was Treasurer of the U.S. Mint (1799–1813). Rush advocated strongly for education, temperance, and the abolition of slavery, and he helped establish two colleges in Pennsylvania.”

I am not against advances in technology. What I am against is *dangerous technology* the public knows little to nothing about, in this case, 5G. Oh boy, look how fast my fancy phone is and other gadgets! For clarity, 5G stands for fifth generation mobile network.

It is important to include backstory history here because the issue of non-ionizing radiation is at the heart of this issue. Back in 2011, I was the first person in the State of Texas to file a complaint regarding the so-called “smart meters” which were going to replace analog meters. It was/is

all about BIG money and the energy companies in this state who received (unconstitutionally) billions of dollars from CON-gress to force those dangerous meters on every house, apt building, businesses and hospitals. They then filled the coffers of those in our legislature at the time who were for sale.

The battle took years. The Texas PUKE aka Texas Public Utility Commission fought us with all the might and dollars at their disposal. As the truth about those meters and the non-ionizing radiation blasted by them spread across the country, so did the movement to get them banned. Hearings were held in Austin to over flowing rooms; same as in several other states. I was allowed 5 minutes to speak which cost me hundreds of dollars; six hour drive each way, hotel, gas, food, expensive parking. [My Statement to the Texas Public Utility Commission](#); it's on video somewhere in their archives.

It didn't matter how many scientists warned how dangerous those meters are, just like with those dangerous and deadly experimental gene therapy injections for COVID 19, the big newspapers in this state labeled us all conspiracy nuts. Oh, dear, I forgot to wear my tin-foil hat the day I spoke at one of the PUKE public hearings.

Just like the FDA (Federal Death Administration), pimps for the big utility companies and big shots at the TPUC all lied while our state legislature scratched their butts and did nothing. After all, their campaign coffers fattened from the energy conglomerates.

In the race to out-do competitors and because Americans want faster, 5G was birthed and is now the norm despite, once again, warnings from doctors and scientists – just like they warned in late 2020, early 2021 and to this day: Do not take those COVID injections.

[Action alert: 5G cellular technology will blanket planetary](#)

[life with ultra-high microwave frequencies](#), September 3, 2016

([NaturalHealth365](#)) “The 5G revolution is rushing toward us and it will bring a whole new era of [harm from ultra-high microwave frequency radiation](#). And those who raise their voices against the danger to our health and our human rights to safety have been the subject of harassment, intimidation and attempts to silence them.

“On July 14, the FCC voted to unleash 5G in the United States, approving sweeping Spectrum Frontiers rules to make spectrum bands above 24 GHz available for 5G. Even though [serious health risks are associated with the proliferation of cell phone technology](#), the attitude of the FCC seems to be ‘full speed ahead and damn the torpedoes.’

“The July 14 vote was preceded, a month earlier, by a June 20th announcement by FCC chairman Tom Wheeler, in which he enthusiastically heralded the coming rollout of 5g applications and networks as a “game-changer” and a “national priority” that will generate “tens of billions of dollars.” Always about the money. Continuing:

“Proof of harm

“Remember – things that the government once tested and considered “safe” include such toxic horrors as thalilomide, smoking, asbestos, lead paint, and Agent Orange. Can we really trust these so-called government ‘health’ agencies?

“Consider this: A \$25m government study by **the National Toxicology Program has concluded that wireless radiation causes cancer**. Natural health advocates say that 70 percent of non-industry studies assess wireless radiation as harmful; with industry studies, the effects are reversed – with only 32 percent showing that wireless radiation is harmful. But, either way, the dangers are clear and being ignored by our government due to corporate interests.

“The public is at risk: Corporate giants care more about revenue and ignore the dangers

“As the annual financial reports of such corporations as Verizon and T-Mobile reveal, **the companies acknowledge they are subject to litigation** relating to the alleged health effects of wireless phones and radio frequency transmitters. The companies warn that this could result in significant damages; they also admit that [wireless technology](#) and adverse health effects do exist – including the threat of cancer.”
Rest at link.

[5G Radiation Dangers – 11 Reasons To Be Concerned](#), Updated Jan. 15, 2020.

[National Library of Medicine.](#) “Health risks from radiofrequency radiation, including 5G, should be assessed by experts with no conflicts of interest. The fifth generation, 5G, of radiofrequency (RF) radiation is about to be implemented globally without investigating the risks to human health and the environment. This has created debate among concerned individuals in numerous countries. In an appeal to the European Union (EU) in September 2017, currently endorsed by 390 scientists and medical doctors, a moratorium on 5G deployment was requested until proper scientific evaluation of potential negative consequences has been conducted.

“This request has not been acknowledged by the EU. The evaluation of RF radiation health risks from 5G technology is ignored in a report by a government expert group in Switzerland and a recent publication from The International Commission on Non-Ionizing Radiation Protection. Conflicts of interest and ties to the industry seem to have contributed to the biased reports. The lack of proper unbiased risk evaluation of the 5G technology places populations at risk. Furthermore, there seems to be a cartel of individuals monopolizing evaluation committees, thus reinforcing the no-risk paradigm. We believe that this activity should qualify as

scientific misconduct.”

[How to Stop 5G: Global Opposition to 5G Technology](#), June 1, 2024 – “A lot of people want to stop [5G](#). And opposition to 5G is springing up so fast it’s hard to keep track. While the objections are many, it is above all the [health risks of 5G](#) that have people around the world acting to stop its implementation. In this post, we’ll look at where 5G is being opposed, by whom, and to what degree of success.

[Unprecedented Opposition to Stop 5G](#) (Really should read.)

“Let me start by saying that I’ve been studying EMF issues for almost a decade at this point; and I was aware of the issues for much longer than that, as my father, [Dr. Martin Blank](#), was very active in the [field](#) of EMF health effects and regulation for three decades.

“So I’ve been following this stuff for most of my life, and I’ve never seen opposition to the rollout of wireless technology like I’m seeing with 5G. It’s happening all over the world.

“What this shows is that the impact of 5G to human health is a genuine concern – for policymakers, for scientists and medical experts, and for citizens alike. Why Is There So Much Momentum to Stop 5G?

“If you read our post on [5G cell towers](#), you’ll come to understand that the fifth generation of mobile technology (aka, 5G) is more powerful and uses a higher [frequency](#) than previous generations. This means that 5G will operate with [much more energy](#) and expose us to far more [electromagnetic radiation](#) (EMF) in a much broader range than ever before.”

(Just one example same article above) “Mill Valley, California, September 2018. After receiving 145 letters from citizens in opposition to 5G (and only five in support of it),

the council of Mill Valley voted unanimously to block 5G deployment. The action was taken via an urgency ordinance – a type of order that can be invoked when the health and safety of a community is at risk.” Rest at link.

While there are dozens of web sites dealing with the dangers of 5G, the ones above are, I feel, the most balanced and contain verifiable information and data.

The only ‘mobile’ phone I’ve ever had is a flip phone because it’s all I need. I keep it in my SUV in case of an emergency or a very quick call to let a friend know I’m on the way. I’ve now owned 2 over the decades; the last one cost me \$29.99; I do pay a small monthly fee for the service. I use it, oh, maybe a dozen hours in a year.

Yes, I’m considered a dinosaur when it comes to all those fancy phones. Yes, I fully understand *and support* how they’ve made it for very useful for businesses (like my little sister who uses it to book clients who are always “on the run”). Quick call to say I love you to your honey. Bringing lunch. **Nothing wrong with that – as long as the technology being used is safe.**

However, people have become so addicted to those fancy phones, they neglect their children (seen it myself) it’s like heroin. Pre-teens and teens. After my husband passed away and because our school district was desperate for substitute teachers, I would sign up for one or two 4-hr sessions a couple of days a week.

From 4th graders to seniors (I taught at every school in our district), kids were seriously addicted to those phones. They were on them the minute they walked outside the classroom until they entered another. Hallways full of kids bumping into each other while blabbing on those phones.

Our school district took strict steps to make sure the only

time the kids could use them was traveling from one class to another. Over the years I've come to the conclusion that those phones have replaced interaction with real humans whether it be friends or family and in my personal opinion, that's not a good thing for society.

[I'm a Mom Who Was Addicted to Her Phone // I Can't Talk to My Mom Because She's Distracted by Her Phone // 70 Addictions to Cell Phone Statistics, Facts & Demographics](#), Dec. 1, 2023
[The people deciding to ditch their smartphones](#), Jan. 23, 2022: "She recalls that one of the pivotal moments that led to her decision was a day at the park with her two boys, aged six and three: "I was on my mobile at a playground with the kids and I looked up and every single parent – there was up to 20 – were looking at their phones, just scrolling away," she says.

"I thought 'when did this happen?'. Everyone is missing out on real life. I don't think you get to your death bed and think you should have spent more time on Twitter, or reading articles online."

Getting back to 5G. During our fight against "smart" meters, I read [Dirty Electricity: Electrification and the Diseases of Civilization](#), 96 pgs by Samuel Milham, MD, MPH. "Dr. Milham is a physician-epidemiologist specializing in public health. He's had more than one hundred scientific publications, many dealing with the health effects of electricity. Tamazzini prize for his pioneering work in describing the occupational cancer risks of electromagnetic fields."

One of the most important, informative books I've read on this issue. Dr. Milham is NOT against new technology. But, he warns: "Dirty Electricity tells the story of Dr. Samuel Milham, the scientist who first alerted the world about the frightening link between occupational exposure to electromagnetic fields and human disease...his discovery that most of the twentieth century diseases of civilization, including cancer, cardiovascular disease (and more) are caused

by electromagnetic field exposure.

“Dr. Milham warns that because of the recent proliferation of radio frequency radiation from cell phones and towers, terrestrial antennas, Wi-Fi max systems, broadband internet over power lines, and personal electronic equipment, may be facing a looming epidemic of morbidity and mortality. In *Dirty Electricity*, he reveals the steps we must take, personally and as a society, to coexist with this marvelous but dangerous technology.”

Of course he’s been ignored, just like the *tens of thousands* of doctors and scientists around the world who warned about those COVID injections *which are not vaccines*. Dr. Death Fauci lied. The CDC lied. The FDA lied and the number of Americans who’ve died because of their lies is criminal.

I know great companies like Pure Talk advertise they have 5G access – *with good intentions* keeping up with “the latest technology”. So many companies use it now it would take a hundred pages to list them all. But, the bottom line is 5G is dangerous to the human body, animals and the environment. It’s long past time for state legislatures (health committees) to hold hearings and **for once listen to scientists who know what they’re talking about and not CEO’s of corporations who care only about the bottom line** and your city council.

Below in the Related section are my columns on those dangerous ‘smart’ meters and the war We the People lost (yes, in some states including Texas, you can opt out and pay an extortion fee each month to keep your original analog meter. It is a lot of reading, but as I wrote above, just like the COVID injections and 5G, science and serious warning from doctors and scientists about 5G, it does take research which I’ve done for you. Those columns are full of critically important scientific information and data. Thousands of meter readers lost their jobs as those “smart” meters are read by technology, not humans.

I don't have the financial resources or knowledge or I would set up a pod cast and read all the columns I wrote on smart meters, the big fat LIE about COVID PCR testing, those dangerous and deadly COVID injections, the climate change hoax and 5G so that Americans can listen while driving to work, doing chores, etc. *"Educate and inform the whole mass of the people... They are the only sure reliance for the preservation of our liberty."* Thomas Jefferson

Dr. Milham dedicated his book to Eddie O'Gorman, founder of the UK charity Children with Leukemia, and to the memory of his children, Paul and Jean and his wife, Marion, all of whom died of electromagnetic field-related diseases.

Is it any wonder America is a sick and dying nation – even before COVID was let loose? **I highly recommend:** [Listen to an interview with Dr. Samuel Milham by Camilla Rees of ElectromagneticHealth.org](#)

For a thorough, comprehensive education on the Fed, the income tax, education, Medicare, SS, the critical, fraudulent ratification of the Seventeenth Amendment and more, be sure to order my book by calling 800-955-0116 or click the link, [Taking Politics Out of Solutions](#), 400 pages of facts and solutions. Order two books and save \$10.00

[My fight against the 'smart meter'](#) – (You don't want one of those dangerous things on your house), August 15, 2011 // [Update: My Fight Against the 'Smart Meter'](#), Jan. 24, 2014.

[Go to this page – very important information.](#) Unfortunately, due to time, some of the links are no longer available. One of the real important one is still active: [Radiofrequency Radiation: The Invisible Hazards of “Smart” Meters](#)

[Non-Ionising Radiation](#) – “5G wavelengths cover a spectrum up to around 52 GHz, so would classify as non-ionising radiation.”

I must also pay tribute to a true warrior whom I met and became friends with after I poked the bear right in the eye: Thelma Taormina. Thelma and her husband Nick were key in helping raise tens of thousands of dollars to pay our legal fees. It absolutely broke my heart when Thelma died from small cell carcinoma. [In Memory Of An American Warrior – Thelma Taormina](#), April 7, 2015. Yeah, she actually did: [Texas Activist Who Pulled Gun on “Smart Meter” Man Speaks Out](#), July 30, 2012 (You Tube pulled her interview about that incident; Thelma was not charged.)

[How Many More Will Die Before FDA Ghouls Are Held Responsible?](#) Mine, July 14, 2008: “As you might expect, the authority of the FDA arises from a 1906 international Agreement for Unification of Pharmacopeial Formulas for Potent Drugs.” Yes, the FACTS in that column should be a wake-up jolt *because nothing has changed with the FDA.*

And speaking of being lied to by government agencies (FDA, CDC, FBI, Secret Service), there’s a new web site focusing on 9/11, Truthlink. It is the main issue of my column last week: [Trump Will Release Remaining JFK Assassination Files – What About 9/11?](#)

“Our” government has lied to We the People about WACO, TWA Flight 800, KAL 007, OKC, the so-called Russian Dossier paid for by Hildebeast Clinton’s campaign to ruin Trump, the attempted assassination of Trump last month and **they’ve been lying to the world about 9/11 for the past 23 years.**

[Truthlink's web site](#) is one of the most comprehensive on the organizations (and names) working to destroy our republic. Nearly daily postings give very deep dive investigations into who these evil doers are and you will be shocked. Many will be in denial because trust shattered most of the time never recovers.
