

Why Immigration Doesn't Work: Most Important Video For Americans

How can you imagine another 100,000,000 (million) legal immigrants imported into America by 2050—a scant 33 years from now? How do quantify the environmental, sociological and quality of life factors? How do you comprehend the water, energy and resource shortages facing Americans?

How do you solve the accelerating environmental factors such as species extinctions, carbon exhaust, crowding and destruction of habitat? What do you do when oil exhausts itself in this century?

Yes, I've written thousands of columns as to what America faces as to endless immigration. But all my words don't amount to a hill of beans until every American "sees" what's coming with his or her own eyes. (I witnessed what's coming in my

bicycle travels around the world.) Today, please forward these two videos to every person on your social media contact list. Send them out to Facebook, Twitter, LinkedIn, Blogger, Tumbler and more. Send to your contact lists.

These two videos possess the power through "visual witnessing" to create a consciousness shift, critical mass shift and tipping point toward a viable civilization with enough people

taking action to call for Congress to call for a suspension of all immigration into the United States. Since the third world continues birthing 80 million new babies, net gain annually, their line of desperate refugees only grows; it never diminishes.

The [first 5-minute video shows you the source of endless immigration](#) and why it won't stop. It will sober you if not shock you to the futility for any further immigration into any Western country:

"Immigration, Poverty, and Gum Balls", Roy Beck, director of www.numbersusa.ORG

The [10-minute video](#) shows you what another 138 million people will look like in 33 years by 2050. It projects what it will look like for your children when we double from 300 million to 625 million before the end of the century.

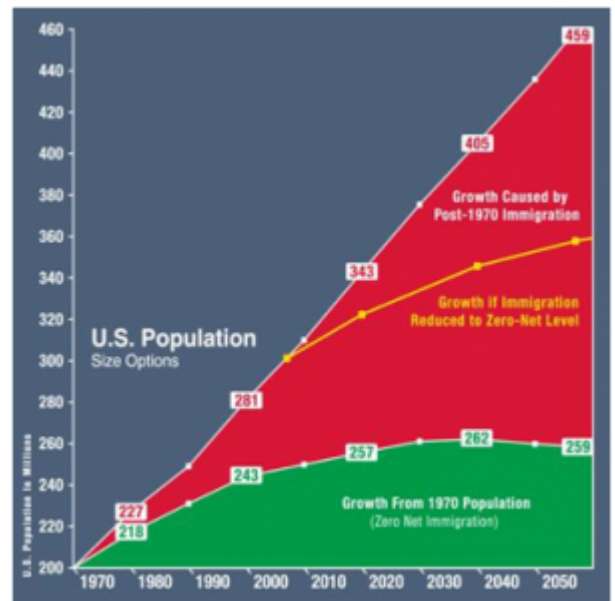

"Immigration by the numbers—off the chart" by Roy Beck.

This graph shows you what it looks like:

(Permission to republish this population graph by Roy Beck, www.NumbersUSA.org)

These two quotes by top experts ask you what's going to happen to your kids when the oil depletes in this century. And, there is no viable energy source on the horizon to replace oil.

“The cheap oil age created an artificial bubble of plentitude for a period not much longer than a human lifetime...so I hazard to assert that as oil ceases to be cheap and the world reserves move toward depletion, we will be left with an enormous population...that the ecology of the earth will not support. The journey back toward non-oil population homeostasis will not be pretty. We will discover the hard way that population hyper growth was simply a side-effect of the oil age. It was a condition, not a problem with a solution. That is what happened and we are stuck with it.” James Howard Kunstler, *The Long Emergency*

“As we go from this happy hydrocarbon bubble we have reached now to a renewable energy resource economy, which we do this century, will the “civil” part of civilization survive? As we both know there is no way that alternative energy sources can supply the amount of per capita energy we enjoy now, much less for the 10 billion expected by 2050. And energy is what keeps this game going. We are involved in a Faustian bargain—selling our economic souls for the luxurious life of the moment, but sooner or later the price has to be paid.” Walter Youngquist, *energy*

Final question fellow American: what kind of a civilization do you want to bequeath to your kids? Because what you do or don't do, you will hand it over to future generations.
